DocuSign Envelope ID: F25CB5EA-4488-4D71-A96D-F7114FC41985

United Nations Development Programme

Country: India

Country Plan

Project Title: Support to collectively respond to the climate emergency and establish resilient development pathways for sustaining human security and green transformation

Sub-title (national) if any: Promoting energy solutions and strengthening urban system to ensure human security under climate emergency in India

Expected UNDAF/CP Outcome(s): Outcome 5: By 2027, Government of India, state governments, communities' private sector and other actors take informed actions to address climate change, pollution, biodiversity loss and restore ecological integrity through improved knowledge, capacity and mainstreaming of relevant actions across sectoral programmes, policies and plans

Expected CPD Output(s):

Output 3.1: Institutional and policy frameworks developed and strengthened to address climate change, enhance green recovery, prevent environmental degradation and promote conservation and circular economy

Output 3.3: Climate change resilience accelerated, capitalising on technological gains and clean energy financing for marginalised communities to support NDC commitments

Initiation Plan Start/End Dates: March 2023 – March 2024

Implementing Partner: UNDP

Brief Description

India's diverse and large geography faces a myriad of climate change impacts, whose unpredictability and severity require urgent and tailored solutions. The disparity in the socio-economic conditions of its population adds an additional layer of vulnerability to the country's risk profile, posing a serious threat in terms of human security. Severe climate change induced disasters are increasingly threatening human security - displacing people, and destroying sources of livelihoods, reversing the developmental gains attained over decades. It is in this context that the Government of India (GoI) continues to scale its ambition towards the Paris Agreement and addressing climate change. This was reiterated at COP27, where GoI both formally enhanced its Nationally Determined Contributions (NDCs) and presented its first Long-Term Low Emission Development Strategy (LT-LEDS).

To support the aforementioned targets and goals, the grant extended under Climate Promise Japan Supplementary Budget 2022 will be utilised to:

1. support adoption of low-emission technologies in hard to abate (125 steel re-rolling mills) and emission intensive (100 electric vehicles for urban waste collection) sectors;
2. deploy distributed renewable energy technologies to set up over 400 green micro-enterprises/ livelihoods;
3. develop detailed sub-national plans to increase resilience of climate-vulnerable communities and infrastructure systems - (i) support hazard specific risk management plans at national and city levels, (ii) resilient renewable energy assets and (iii) early warning systems
4. study macroeconomic implications and present policy recommendations for just transitions at sub-national level

I. PURPOSE AND EXPECTED OUTPUT

India, a fast-growing emerging economy, has made significant strides in addressing climate change which has been posing compounding threats to human security. This has been done through deployment of low-emission technologies to mitigate greenhouse gas (GHG) emissions; and enhancement of community resilience to respond to extreme weather events. Moreover, the **unpredictability** and erratic nature of extreme weather events have the worst impact on vulnerable populations, including socio-economically disadvantaged groups, and marginalised communities – indicating a need for a people-centred and prevention-oriented approach to climate action. In response to the unique circumstances in varied communities, the project will develop tailored interventions, strategies and action plans to increase resilience of communities and infrastructure in order to enhance human security of vulnerable population.

Due to climate change, unpredictable and recurring floods have become the norm in several Indian cities.The increasing economic losses due to the disasters have brought to fore the need to build the resilience in urban settings in India. Therefore, the project will support the city administrations in at least two (2) cities to conduct baseline analysis and develop technical proposals to strengthen resilience against flooding.

UNDP will also support the National Disaster Management Authority (NDMA, Ministry of Home Affairs), and select partner cities, to support implementation of National Hazard Specific Risk Mitigation programmes on earthquakes, landslides, lightning, forest fire, etc. UNDP will help NDMA launch these programmes and provide technical support to leverage the available public financing as well as utilize digital technologies such as AI, GIS based mapping, nature-based solutions, etc. Further to build on the gains of the previous iteration of the JSB grant, UNDP will work with sub-national departments to strengthen institutional systems to enhance dissemination of climate information in two climate fragile Himalayan States. Capacity building and sensitization will be conducted to benefit government stakeholders and sub-national departments, for converting weather and climate data into targeted impact-based forecasts and for more effective early warning systems through robust communication channels. These forecasts will be fed into sector-specific decision support systems for agriculture and rural development, disaster risk management, tourism, forest management, water, and health. UNDP will also aim to mobilize a cadre of climate champions, who will be trained to engage with the community to ensure last mile connectivity and sustainability.

India is poised for a massive increase in renewable energy (RE) installations as promised in its NDCs. A By the end of 2021, India has installed 161.28 GW of RE technologies, representing 39.91% of the overall installed capacity. UNDP will undertake a study to ascertain the Resistance, Reliability, Redundancy and Recovery aspects of resilience of renewable energy infrastructure. The aim is to identify and propose policy recommendations on infrastructure resilience, to the regulators, State Disaster Management Authorities, State Renewable Energy Development Agency and other relevant stakeholders.

DocuSign Envelope ID: F25CB5EA-4488-4D71-A96D-F7114FC41985

The above increase in RE installations would majorly come from the utility-scale installations of solar, wind and large-hydro power plants. However, there is a huge potential for decentralized renewable energy (DRE) systems that needs to be exploited to increase reliability of energy access at the last mile. Therefore, the project will focus on new DRE applications to power new livelihoods in line with MNRE's recent cross-ministerial Framework for Promoting DRE for Livelihood Applications. UNDP will engage with other Ministries like – Agriculture, Textile, Tribal Affairs and Rural Development, etc. to identify and demonstrate relevant DRE based livelihood applications (textiles, horticulture, forest produce, agriculture, fisheries etc)[1]. These DRE powered livelihood are expected to enable micro-enterprises and livelihoods that improve working conditions, production capacities and net-incomes, and therefore, enhance human security of the target beneficiaries. National level incubation challenges will also be conducted to identify new DRE based livelihood applications to replace the use of fossil-fuels.

The 1.5C goal by the Paris Agreement can only be achieved if adoption of clean and efficient energy is scaled rapidly, particularly in hard to abate sectors such as Steel. As the world's 2nd largest producer of crude steel, India produces 118 million tons of steel annually, of which 50% is produced in 3,500 mini steel plants in specific clusters. UNDP will develop customised efficient technology packages for these steel re-rolling units. The project will incentivize up to 125 steel mill units to implement the customised solutions, which is estimated to avoid about 92,500 tons of CO2 carbon dioxide annually.

The project also encourage clean solutions at the nexus of two emission-intensive sectors - the transport and waste, by deploying 100 electric vehicles (EV) across 4 States to enhance waste collection, an essential link in the waste management value chain. The containers in the electric vehicles will be optimally designed to ensure efficient segregation and collection, with the aim to increase the waste processing efficiency at Material Recovery Facilities.

Finally, UNDP under this project aims to support a sub-national level Taskforce to develop a Just Transition Framework in Jharkhand, a coal-rich Indian state. The project will conduct a macroeconomic study to determine a baseline and possible scenarios for a truly inclusive system/economy transition. Additionally, a consultative survey will be undertaken to identify gaps in the capacity of communities in and around coal mines, to subsequently skill and train target communities with a focus on women and youth. The aim under this activity as with all other project activities is to equip the target communities for the transition to a low-emission economy without undermining their capacity ability of target communities to participate and gain from the transition. *Global Outputs of the Pillar 1 of the Global Climate Promise Framework "Clean energy and just transition towards net-zero pathways":*

1.1 Driving investment in clean energy
1.2 Support to Ministries of Energy, Finance, Environment and Planning to address key energy-related decisions towards just transition

Country Output 1: Enable adoption of efficient and clean energy solutions in the MSME and Green Livelihoods

Under Output 1, the project will aim to deploy low-emission technologies in hard to abate sectors (industry - steel), medium, small and micro enterprises (MSMEs) and livelihoods. To inform and activate the market ecosystem, adoption of technologies will be bolstered with technical and business incubation support for fostering sustainability and upscaling of innovative technologies in India. Additionally, the project will also deploy electric vehicles for waste collection, yielding energy transition dividends in both the transport and waste value chain. The second round of the JSB grant will also build on its existing work in significant coal mining areas, to estimate the impacts and develop a framework for a Just Transition. An overarching aim of this output will be to generate opportunities for green jobs and alternate livelihoods in order to enhance human security. This will include training in deployment, operation, and maintenance of renewable energy infrastructure; and upskilling of community members who are both directly and indirectly dependent on coal mines - by building synergies and scaling with other ongoing government programmes and schemes.

DocuSign Envelope ID: F25CB5EA-4488-4D71-A96D-F7114FC41985

Pillar 2: Helping vulnerable and fragile settings to be more resilient to climate impacts

Global Outputs

2.1 Scaling-up adaptation, resilience, and disaster risk reduction tools and ensuring they are available in fragile settings and to marginalized groups

2.2 Aligning targets in NDCs with national adaptation strategies and plans

Under Output 2, the project will enhance resilience of urban and rural communities through specific activities and studies. At the national level, the project will partner with NDMA to support the implementation of its National Hazard specific Risk mitigation programmes, including the studies to assess the resilience of renewable energy infrastructure. The project will also contribute to strengthening capacities of at least two cities towards building resilience to climate change and extreme events. At the sub-national level, the project will strengthen the capacities of key stakeholders to provide a more effective climate information service and early warning system. Project activities are aimed to directly benefit communities with vulnerable human security, especially the poor and women headed households, landless, socially excluded/marginalised groups.

Country NDC sector	Country NDC target	Project activity contributing to this target	Alignment with LT-LEDS, as relevant
Adaptation	To adapt to climate change by enhancing investments in development programmes in sectors vulnerable to climate change particularly agriculture, water resources, Himalayan regions, coastal regions, health and disaster management.	Assessing resilience of Renewable Energy assets to climate shocks and making recommendations to the Government of India. Support the NDMA in developing hazard specific national risk mitigation programmes and Integrated Flood Management action plans in 2 cities and Strengthened institutional systems for dissemination of climate information and advisories in 2 risk-prone Himalayan districts.	Promote adaptation in urban design, energy and material-efficiency in buildings, and sustainable urbanisation
Mitigation	To reduce Emissions Intensity of its GDP by 45 percent by 2030, from 2005 level	Conduct energy audits and renewable energy assessments for mini steel plants, to identify customized solutions and support adoption by mini steel plants.	Promote economy-wide decoupling of growth from emissions and development of an efficient, innovative low-emission industrial system
		Deploy 100 EV for waste collection in 4 States.	Develop an integrated, efficient, inclusive low-carbon transport system
	To achieve about 50 percent cumulative electric power installed capacity from non-fossil fuel-based energy resources by 2030, with the help of transfer of technology and low-cost international finance	Deploy renewable energy applications and energy efficient solutions, to strengthen 3980 livelihoods in the textile, agriculture/horticulture and minor forest produce sectors.	Low carbon development of electricity systems consistent with development

DocuSign Envelope ID: F25CB5EA-4488-4D71-A96D-F7114FC41985

	including from Green Climate Fund (GCF)		
	To mobilize domestic and new & additional funds from developed countries to implement the above mitigation and adaptation actions in view of the resource required and the resource gap.	Strengthened governance systems and frameworks to guide just transition at the sub-national level.	Economic and financial aspects of low-carbon development

II. MANAGEMENT ARRANGEMENTS

Team: UNDP as the lead agency will be responsible for all matters related to project planning, coordination, implementation, and financial management of the project. A dedicated Project Management Unit (PMU) is proposed which will function under the guidance of Head, Environment, Energy and Resilience Unit at the UNDP India CO. The PMU includes a full-time dedicated team of experts including a project manager, M&E Officer, Adaptation, Mitigation and Resilience specialists. In addition, the **Sustainable Energy Hub @UNDP HQ** will be providing advisory support. Specialists from other teams at UNDP India CO like the Inclusive Growth Unit, Accelerator Labs, etc. will be co-opted to support and facilitate specific components of the project. The PMU will work in close collaboration with the Government partners (National and sub-national), technology providers, communities, and the private sector.

UNDP will undertake project management, monitoring, evaluation, and reporting. This includes providing all required information and data necessary for timely, comprehensive, and evidence-based project reporting, including results and financial data, as necessary. In addition, UNDP will undertake procurement of goods and services, including human resources; will oversee financial expenditures against project budgets; approve and sign the multi-year work plan; and sign the financial report or the funding authorization and certificate of expenditures. A final narrative report will be submitted within three months after the completion of project and final financial report within one year. Upon completion of the implementation of the project, the final report will be shared with the partner government agencies.

Gender: The project will undertake a gender analysis of all the programmed initiatives to plan and conduct trainings to ensure women and girls benefit from the interventions. Through stakeholder consultations, the proposal will aim for meaningful participation of women in both planning and implementation of the project activities.

Reporting: The project team will submit the final narrative report within three months after the completion of project, and the final financial report within one year upon completion of project.

Partnership (India): Ministry of New and Renewable Energy, Ministry of Earth Sciences, National Disaster Management Authority (MHA), State Governments, Urban Local Bodies (at least 2 cities)

Partnership (Japan specific):
Below table shows concrete Japan specific partnership UNDP India established and planning to implement in the framework of this project. Apart from below, UNDP will explore a possibility of collaboration with more Japan related organisations such as NGOs and academic institutions.

#	Partners	Description
1	Embassy of Japan in India (EoJ)	UNDP has been closely working with EoJ in a wide range of initiatives including ongoing JSB 2021 Net Zero Emission (NZE) project. Under JSB 2022 project, UNDP will implement multiple events jointly with EoJ, such as project launch event, press release, and handover ceremony. Further,

DocuSign Envelope ID: F25CB5EA-4488-4D71-A96D-F7114FC41985

		UNDP and EoJ are keen to identify potential programmatic collaboration under this project. For example, the two organizations are in discussion to incorporate the concept of carbon credit under Activity 1.1 in a way to further incentivise MSMEs to adopt low carbon solutions. EoJ agreed to hold a meeting with UNDP in order to further assess the feasibility of collaboration once the project is formulated.
2	JICA India	JICA India is an important development partner of UNDP India, with whom the Country office closely collaborates. In ongoing JSB 2021 NZE project, UNDP is on the way to set up several EV charging stations in the vicinity of metro stations in Delhi, which is a flagship assistance of JICA in India. For JSB 2022 project, UNDP is in discussion with JICA to explore collaboration in some activities such as Activity 1.1 and 2.2 where JICA has ongoing/past projects whose outputs are similar to the proposed activities. JICA agreed to hold a knowledge exchange session with UNDP in order to further assess the feasibility of collaboration once the project is formulated.
3	Japan Chamber of Commerce and Industry in India (JCCII)	JCCII has membership of 470+ Japan-related private companies in India. UNDP India has closely collaborated with JCCII in order to promote private sector partnership to accelerate SDGs. The collaboration has recently been upgraded to the signing of MoU for the said purpose in UNDP projects including JSB 2021 NZE project. With JCCII, UNDP successfully mobilised CSR funds attached to JSB 2021 NZE project. Further, procurement information such as Request for Proposal (RfP) has been shared to 470+ Japanese companies through the network of JCCII in order to encourage participation of Japanese companies. UNDP will continue to collaborate in the same manner with JCCII in this project.
4	Kyosan India Private Limited	Kyosan India is a subsidiary company of Kyosan Electronic Manufacturing Co., Ltd. in Kanagawa, Japan. In joint reach out effort with JCCII, UNDP has established a CSR partnership with Kyosan India under JSB 2021 NZE project where we received funds to set up additional EV charging stations in Delhi. Further, UNDP received unofficial approval from Kyosan India to provide CSR funds to this project. After the approval of Diet on JSB 2022, the company will discuss in its board meeting regarding the approval of its CSR contribution to this project.

Visibility:

UNDP will ensure that the generosity of the Government of Japan is fully and visibly acknowledged. This will include a press release, project related events and human interest stories. Japan's logo will be placed on supplies and other visibility materials including banners and project related documents to ensure that partners and end beneficiaries are aware of the generous contribution of the Government of Japan.

On the left: Site branding of Oxygen generation plant signboard (JSB 2020 Covid response project)

On the right: Branding of oxygen generation plants (JSB 2020 Covid response project)

In collaboration with UNDP Tokyo Representation Office (TRO), UNDP India will produce key project related news and media outreach in Japanese. Such news and press releases will be communicated widely via different social media at multiple levels at Country Office, TRO, Regional Bureau and the Headquarters.

<Example from ongoing and previous projects implemented by UNDP India>

DocuSign Envelope ID: F25CB5EA-4488-4D71-A96D-F7114FC41985

In addition, UNDP India will prepare project related promotion videos in order to widely communicate the impact of the project and contributions of Japan. Such videos will be prepared not only in English for exposure in India and across the globe, but also in Japanese to widely communicate Japan's contribution to its taxpayers. Further, UNDP will plan joint field visits and joint handover ceremonies at project implementation sites with EoJ in order to strongly enhance Japan's visibility on the ground.

III. RESULTS FRAMEWORK

Intended Outcome as stated in the UNSDCF/Country [or Regional] Programme Results and Resource Framework: Outcome 5 - By 2027, Government of India, state governments, communities' private sector and other actors take informed actions to address climate change, pollution, biodiversity loss and restore ecological integrity through improved knowledge, capacity and mainstreaming of relevant actions across sectoral programmes, policies and plans
Outcome indicators as stated in the Country Programme [or Regional] Results and Resources Framework, including baseline and targets: Indicator 3.3.1. Amount of emission reduced at national level [Baseline (2022): 15 million tCO2e; Target (2027): 50 million tCO2e] Indicator 3.3.2: Increase in number of renewable energy installations [Baseline (2022): 200 installations; Target (2027):1,500 installations]
Applicable Output(s) from the UNDP Strategic Plan: Output 3.3: Climate change resilience accelerated, capitalizing on technological gains and clean energy financing for marginalized communities, to support NDC commitments
SDGs to which the project will contribute: SDG 5, 7, 8, 9, 11, 13 and 17
Project title and Atlas Project Number: Support to collectively respond to the climate emergency and establish resilient development pathways for sustaining human security and green transformation (ATLAS Project ID: 00142683, ATLAS Output ID: 00130859)
