UNITED NATIONS DEVELOPMENT PROGRAMME

Empowered lives. Resilient nations.

PROJECT DOCUMENT
Sierra Leone

Portfolio Title: Natural Resource Management, Climate Change Mitigation, Adaptation and Disaster Resilience Portfolio

Project Number: 00117364

Responsible parties: Ministry of Environment, Ministry of Land, Housing and Country Planning (MLHCP), National Protected Area Authority (NPAA), Ministry of Mines and Mineral Resources (MMMR), Environmental Protection Agency (EPA), Ministry of Fisheries and Marine Resources (MFMR) Ministry of Water Resources (MWR), Sierra Leone Maritime Administration (SLMA), National Disaster Management Agency, Sierra Leone Meteorological Agency (SL-MET), Forestry Division, Ministry of Agriculture and Forestry (MAF), National Water Resources Management Agency (NWRMA), National Minerals Agency (NMA).

Start Date: 01/01/2020 **End Date:** 31/12/2023 **PAC Meeting date:** 16th December 2020

Brief Description

Sierra Leone is endowed with substantial natural resources of croplands, forests, rangelands, freshwater, wetlands, biodiversity, wildlife, fisheries and Mineral resources. While these resources have continued to build the economy of the country, their unsustainable use over these years have resulted in environmental degradation (flooding, windstorm, landslides, erosion, wildfire and climate change risks, etc). The human Development Index for Sierra Leone of 0.438 is among the lowest in the world with the country ranking at 181 out of 189 (Human Development Report 2019 (HDR). These occurrences have clearly signified the need for sustainable environmental management associated utilization of these Natural Resources.

To support the Government of Sierra Leone (GoSL), UNDP is working closely with relevant Ministries, Department and Agencies (MDAs), INGOs NGOs, CBOs, and Private Sector Institutions on strengthening environmental governance, climate change mitigation, adaptation and disaster risk management issues. The main objective of the portfolio is to enhance effective natural resource management, to build resilience of the country to climate change impacts and disaster risks. Achieving this objective requires integrated efforts that ensures synergies across a broad range of relevant stakeholders for sustainable outcomes. The interventions under the portfolio will target vulnerable groups including women, persons with disability and youths. A holistic approach will be adopted covering key economic, social and environmental dimensions including improving institutional and policy framework, to address climate change, strengthening disaster preparedness, risk reduction and improving management of the Sierra Leone waters.

Contributing Outcome (UNDAF/CPD, RPD or GPD):
Outcome: By 2023, Sierra Leone benefits from a more productive, commercialized and sustainable agriculture, improved food and nutrition security, and increased resilience to climate change and other shocks

Indicative Output(s) with gender marker[2]:

Output 1.1: Relevant MDAs has strengthened capacities to enforce inclusive regulations and gender responsive policies on conservation of protected areas in Costal and Urban planning and Development (GEN 2)

Output 1.2: Capacity of MDAs in NRM at national and local levels strengthened to ensure sustainable use of environmental resources including livelihoods (GEN 2)

Output 1.3: Preparedness systems in place at community level to mitigate the impact of natural and man-made disasters (GEN 2)

Output 4.3. Vulnerable communities in targeted districts are enabled to harvest safe, clean and drinkable rainwater (GEN 2)

Total resources required:		$11,620,000
Total resources allocated:

I. DEVELOPMENT CHALLENGE

Sierra Leone is endowed with a variety of natural resources including lowland rainforest, mountain forest, freshwater, swamps, coastal and marine ecosystems. However, the irrational use of the environment and natural resources over the years have resulted in environmental degradation leading to flooding, windstorm, landslides, erosion, wildfire among others causing disasters around the Country. In the same vein cutting down of trees in catchment areas have resulted to water stress particularly in the western Area which hosts 1.5 million people. Poverty and population increase are the underlying causes of environmental problems in Sierra Leone which have profound implication on deforestation and land degradation. To effectively address disaster issues in the country the House of Parliament has recently passed an Act that establishes an autonomous National Disaster Management Agency. However, the agency is still in its infancy stage and lacks the capacity to adequately tackle disaster risk issues across the country

The policy, legislative and institutional framework for environment and natural resources management in the country is underpinned by Sierra Leone's National Land Policy (2015), Environment Policy (1994), supported by the Environmental Protection Act 2008 and other related legal frameworks. With the growing global environmental awareness and in pursuit of sustainable environment and natural resources management, GoSL felt the need to create institutions that would be responsible for the protection and management of the environment and its natural resources. The recent effort by Government to establish the Ministry of Environment intends to bring together institutions responsible for the management of environment and its natural resources in a more holistic and coordinated approach. Over the years, there has been improvement in response to environment and natural resources management challenges including the ratification and domestication of several Multilateral Environmental Agreements (MEAs). However, more efforts are needed to keep pace with the global sustainable development agenda. The main areas of concern remain in identifying ways in which Sierra Leone can promote the obligations under the Climate Change and Biodiversity Conventions.

The Mines and Minerals Act of 2009, which came into force on the 7th January 2010 also addresses mining leases and licensing requirements for artisanal and industrial mining, more specifically, the mining operation; schedule, nature of production, potential environmental and social impacts, forecast of capital investment, operating costs and revenues, and the anticipated source of financing and proposed mitigation programs. Land Degradation is already a serious problem in Sierra Leone. Ranked in order of priority, logging, firewood collection and mining have been identified as direct causes of land degradation in Sierra Leone.

The country is vulnerable to several natural hazards, including recurrent floods, erosion, tropical storms, epidemics, that significantly impact the health and livelihood of its populace. In the recent past, the country has suffered three major disasters from the worst globally recorded Ebola outbreak, to the flooding and mudslide incident that displaced over 6000 people, affected 1,960 households, killing 502 persons of whom the majority were women and children. The mortality risk from multiple hazards is very high. From the last 15 years, 4 major floods have affected over 22,000 people and caused severe economic damage. Exposure to natural disasters is likely to worsen in the coming years[1].

The Ministry of Lands and Country Planning (MLCP) is the Central Government institution responsible for town and country planning. However, development control which is a very important arm of the implementation process of planning is with the Department of Housing and Country Planning. However, the Department is faced with huge challenges. The lack of a robust institutional and legal framework has created constraints which has prevented the carrying out of effective land use planning in the country. The Central Government agency, which is responsible for land use planning, does not have the capacity to propose improvement in the legal framework, develop and implement plans at national and regional level and ensure guidelines for physical

[1] World Bank Report - Damage and loss assessment on Sierra Leone Disasters 2017

planning at local level. In addition to this, there is the lack of coordination and cooperation between the various divisions in the Ministry.

The Ministry is inadequately staffed, financed and equipped to undertake physical planning. Local councils do not have the capacity to carryout physical planning functions, and they need trained staff. There is a lack of training facilities in the country for land use planning, data collection techniques using IT and GIS, development control and building inspections. The local councils lack the capacity to include long term development goals into their development plans.

Lack of coordination and participation. Line ministries and other relevant agencies do not practise formalized information sharing, consultation and coordination regarding development programmes and development projects of importance for development and physical planning.

There is not enough contribution from Central government ministries and agencies as regards information to local councils to ensure implementation of central policies and development goals at local level involving local, political and technical resources for the improvement of local development. iii. The land use planning authorities and the local councils rely little on stakeholder (NGO's, civil society and private sector) and public participation in local development planning including issues related to physical development. There are minimal Assessments and Evaluations conducted on the functioning Laws of significance for Urban and Land Use Planning and Management in Sierra Leone.

Inadequate attention and support to land use planning in general, policy makers and senior government officials have little understanding of and give little support to land use planning, amongst other things leading to:

- An inherent lack of understanding at all levels of government, of the relationship between social and economic policies and land use planning; and also the need for plans to prepare, rationalize and control the sustainable use of the territories, the areas, the parcels and the plots.
- The low priority given to physical planning by successive governments in the past, which has led to lack of urban development goals and visions, support to development control, inadequate staffing.
- The low priority to encourage and support the implementation of land use planning and development control to local councils have left them without inspiration, motivation and resources to carry out their responsibilities.
- Weaknesses of this system (land use and development control) have been manifested in land use planning decisions being based on often manipulative grounds which engender for the example the misuse of the issue of building permits to citizens.

The country has approximately 406 kilometres of coastline with numerous islands and an extended continental shelf. Over the last three decades, Sierra Leone has been forced to confront immense challenges that shook the very foundations of our State. Almost 80% of the world's population lives close to the sea. 90% to 95% of the world's trade is transported through the sea and 80% of Sierra Leone's protein comes from the sea. Despite the sea's significant contribution to Sierra Leone's livelihood, little or no effort is made towards maritime domain protection.

Despite our location adjacent to the ocean, Sierra Leone is not a maritime State; the Country has not yet taken the steps to pursue the sustainable exploitation of its blue economic potential to secure the marine environment for the betterment of the current and future generation.

Illegal, Unregulated and Unreported (IUU) Fishing is, perhaps, the maritime security issue that most significantly threatens Sierra Leone. It is estimated that there is a huge loss to the economy due to fish each year to illegal, unregulated or unreported fishing and dire consequences to the marine environment. The United Nations Food and Agriculture Organisation (FAO) profile on Sierra Leone indicates that the Country is losing an estimated US $29 million every year due to illegal fishing vessels. This risk is further extended to the loss of livelihood of many especially so for those in our coastal communities.

Maritime Pollution is also another serious problem ravaging the Country for many years where foreign ships have taken advantage of our lack of State presence and discharged sludge and oil waste into our waters. The Administration has already developed an Oil Spill Contingency Plan and drafted other regulations in the bid to achieve same.

Sierra Leone, being a nascent maritime state, is yet to achieve the desired rate of success with respect to the stated SAR objective due to challenges such as lack of coordination funding, lack asset and maintenance capabilities, Sensitization of the locals and; inadequate resources.

The absence of ship safety poses a high risk to vessels calling our ports, local commercials vessels and the lives and property at sea which inadvertently poses a threat to the marine environment. ship safety level and as thus aids to navigation are highly significant to act as safety barriers and enhance safety for vessels calling our ports.

The Administration is Limited as there is no designated place of inspections consequently some vessels escape the net as the risk of inspection such vessels out at sea is high.

Sierra Leone is aware of the potentials in our blue economy and realizes that our waters are the lifeblood of our economy, therefore the protection of our marine environment is key to the success of the nation.

Outlined in the National Development Plans, Sierra Leone now seeks to engage all maritime stakeholders, development partners and communities to maximize its maritime potential, and to discover and then harness the true maritime wealth have to offer.

The potential wealth derived from the blue economy cannot be accessed or maintained without strong and stable governance of the maritime domain. And security threats of all sorts, when not addressed, undermines the State's ability to effectively govern its maritime territory. It is therefore necessary to treasure and protect the marine environment so it may continue to provide livelihoods for the generations of the future.

In respect of the stated problems, there is a need to address the issue of the environment and natural resource management in order to make an impact in respect of achieving a number of the SDG's to make the environment a better place to live in by 2030. The intended beneficiaries of the project to be implemented will include rural and urban communities, cities and Ministries, Departments and Agencies (MDAs).

II. STRATEGY

Theory of Change:

Sound environmental management, including natural resource management, is a core function of the state, and one whose importance is growing year by year. The Sustainable Development Goals clearly demonstrate heightened current global awareness of the critical importance of environmental challenges. Accordingly, Cluster 7 of the Sierra Leones Medium-Term National Development Plan demonstrates commitment of the country to build the resilience of the environment, manage the natural resource and improve disaster management[2]. Improved outcomes in natural resource management will provide enormous benefits for poor and vulnerable groups in the country in various ways including better health and more sustainable livelihoods.

The portfolio Theory of Change (TOC) starts from a straightforward premise that; although there is genuine interest from the GOSL to strengthen sustainable natural resource management in the Country, it is evident that this important function of the state cannot be properly exercised without far greater attention to the core governance issues that shape state effectiveness. This requires a focus on the processes and structures through which environment and natural resources

[2] Sierra Leone medium term national development plan 2019-2023

management decisions are made. It will also require focusing on implementation and monitoring the ways in which affected population particularly vulnerable groups are engaged in the process.

Translating environmental intentions and targets into concrete results thus requires other governance capacities that are still weak in the Country including:

- Monitoring of implementation of laws and regulations;
- coordination across ministerial/agency boundaries;
- central-local communication and coordination;

These enhance access to information and voices of groups affected by environmental trends, including the most vulnerable. Attention to these core principles will also result to good governance, transparency, equity, sustainability and non-discrimination in natural resource management.

This TOC directly reflects and responds to current conditions in global sustainable development efforts. This portfolio will pilot an innovative approach to improving environment and natural resources management, by bringing the most up-to-date expertise into existing environment and natural resources projects.

If institutions are strengthened to develop, review and enforce policies, utilise weather, climate and disaster risk information, adopt best NRM practices including sustainable management of water resources, promote alternative livelihoods for efficient energy and enhance monitoring, then natural resources can be managed, efficiently to reduce disasters, poverty and inequality and to sustain healthy ecosystems.

Strategy

UNDP in collaboration with Relevant Ministries, Departments and Agencies (MDAs) as well as other development partners is to address issues relating to sustainable natural resource management and climate change. Tackling these issues is a priority area in the GoSL's Medium-term National Development Plan (2019-2023) with a strategic focus on addressing vulnerabilities and building resilience. Protecting and conserving the environment is also a priority for the UN intervention. This also corresponds with the SDG target of building strong and sustainable environment in contributing to several the SDGs[i] by 2030. In line with this, the UNDP has been working with the Government of Sierra Leone in the implementation of several projects related to keeping the environment safe, friendly and climate resilient. This support has ranged from technical and financial capacities to enable several MDA's i.e. EPA, MLHCP, MWR, ONS and SL MET etc to respond to the modern challenges of environmental and climate resilient issues. The current approach in addressing the natural resources management is engaging all partners at national and local levels, private sector and Non-governmental Organisations in addressing associated challenges.

The current Natural Resource Management, Climate Change Mitigation, Adaptation and Disaster Resilience Portfolio" comprises three (3) components viz. Natural Resource Management, Disaster Risk Resilience and the Sierra Leone National Water and Ocean Management Project. This Portfolio will strengthen the capacity of relevant MDAs to enforce inclusive regulations/policies on conservation of protected areas in coastal and urban planning and development; build the capacity of MDAs in NRM at national and local levels to restore, conserve, ensure sustainable use of environmental resources including alternative livelihood opportunities; enhance preparedness systems; support targeted Vulnerable communities to harvest safe and clean drinking water and the Maritime Agency with tools to effectively monitor and protect the waters of Sierra Leone from illegal fishing.

The management of the environmental impact of extractive industries is one of the most critical challenges facing many resource-dependent developing countries. Growth of these industries can

bring much-needed resources to finance urgently needed social and economic development. However, this has resulted in negative environmental impacts which include but not limited to soil erosion, formation of sinkholes, loss of biodiversity, contamination of ground and surface waters etc. These impacts need to be managed well, from the initial concession negotiations through operation and decommissioning. The rights of affected communities to a safe, clean and healthy environment cannot be achieved without accountability and grievance redress mechanisms. The environment and natural resource management and governance challenges in this process are increasingly recognized as key obstacles to achieving sustainable economic, social and environmental outcomes.

Under the Disaster Risk Management Component, UNDP will work to contribute to building the resilience of Sierra Leone in the face of disasters and climate change, by strengthening the capacities of national government to plan, implement, manage and monitor risk-informed sustainable development. The component will be delivered through the coordination of relevant institutions to link DRR and climate change adaptation through harmonised policies and legal frameworks to foster the integration of risk into planning and budgeting decisions. Data generated from climate risk assessments forms the basis for the development of appropriate disaster and climate change policy and resilience programmes. The recently established National Disaster Management Agency (NDMA) which intends to concentrate efforts on strengthening disaster risk management systems across the country through community engagement activities and implementing community managed projects with structural disaster risk mitigation and awareness raising components for positive behavior change.

The emerging concept of the Blue Economy has been embraced by the Government of Sierra Leone as a mechanism to realize ocean-based sustainable economic development and conceptualized as the national water and the ocean management project. In order to implement the Blue economy, UNDP will collaborate with relevant MDAs to develop and approve the Blue Economy Strategic Framework and Roadmap. This is expected to be an integrated approach to ocean-based sustainable development which brings together economy, environment and society, consistent with the Sustainable Development Agenda 2030 (SDG'14). The Sierra Leone Blue Economy Roadmap will necessarily require the definition of short, medium and long-term actions across a broad range of sectors as well as require fundamental changes to the traditional institutional arrangements that exist to support marine sector resource management in Sierra Leone.

The portfolio will also support government in Strengthening the functional capacity of Sierra Leone Maritime Administration (SLMA). The SLMA currently maintains a regime on the surveys and inspections of vessels operating within the boundaries of Sierra Leone. This is in the bid to ensure that these vessels are safe, secure and marine environment friendly, but this have not been happening due to lack of a designated place for inspection. Ensuring that such a place is done will be important.

UNDP will therefore render support to the SLMA to address the challenges the Institution is currently encountering including and not limited to Monitoring and Coastal Surveillance Capability, Maritime Search and Rescue, Aids to Navigation and Safety and Security of Vessels.

This portfolio will draw upon UNDP's Strategy for Supporting Sustainable and Equitable Management of the Extractives Sector to ensure that work is consistent with the broader effort to allow countries to take advantage of their natural resource endowments without falling prey to the 'resource curse' and to ensure that a conflict prevention lens is applied to programming. UNDP's experience in supporting the development and implementation of national safeguard systems also provides valuable lessons that the portfolio will draw on particularly in the application of accountability/grievance mechanisms among groups affected by mining operations. This portfolio will also further explore synergies with current and future UNDP interventions related to the extractive sector and conflict prevention.

The implementation of the portfolio will include seeking support from UNDP Bureau of Policy and Programme Support (BPPS) and the Regional Hubs regarding the most effective ways to join with other ongoing work, as well as with other development partners within and beyond the UN family.

Dissemination and communication work will be a key component of this portfolio. UNDP aims to influence global environment and natural resources governance efforts, by demonstrating the added value of applying governance perspectives to environment and natural resources management portfolio. Links will be established with other projects and international organizations, with whom this approach and its results will be shared regularly. The goal of the communication work will be to influence both environmental and governance work being done in other countries.

The key activities therefore will include:

- Support the development/review and implementation of policies and regulations regarding natural resources including protected areas, water resources, terrestrial and coastline. These include but not limited to the review of Forestry Act, the NPAA act, the EPA act and development of buffer zone policy.
- Rehabilitate and restore degraded and protected areas
- Raise public awareness on NRM including the protection and protection and conservation of water resources and climate change risk/vulnerability targeting most vulnerable communities.
- Maintain database for early warning information
- Develop robust data management system for mitigation measures.
- Improve innovation/ research and building linkages among research Institutions within and outside Sierra Leone (if the need arises).
- Support agro-finance institutions to develop attractive bankable policies
- Support Institutional capacity building for NRM
- Transform mined -out/degraded lands into viable land use
- Establish and strengthen community co-management committees
- Support the enhancement of agroforestry/community-based forest management and demarcation of protected areas;
- Develop National Spatial Development framework
- Review and validate the enactment of the new town and Country Planning Act
- Enhancing Disaster Preparedness systems at community level to mitigate the impact of natural and man-made disaster as part of the strategy to promote Disaster Risk Governance in Sierra Leone.
- Promote multi-stakeholder approach (including the private sector) to address disaster related issues.
- Strengthen preparedness systems at national and community levels to mitigate the impact of disasters including the promotion of nature-based solutions to address DRR issues.
- Enhance monitoring and Coastal Surveillance Capability is built.
- Monitoring and Coastal Surveillance Capability
- Aids for Navigation
- Maritime Search and Rescue,
- Safety and Security of Vessels
- Identify and map Watersheds, catchments and sub-catchments areas in critical danger in Western Area and Rokel River Basin.
- Protect / restore / regenerate catchment areas in danger in Western Area and Rokel River Basin.
- Support the development of Water Resources Management Master Plan mainstreaming gender concerns
- Support the popularisation of the regulatory framework of the NWRMA and support staff of relevant MDAs
- Support the establishment of water quality laboratory

III. RESULTS AND PARTNERSHIPS

Expected Results

The following are the expected results of the project:

a) Strengthened partnership and cooperation for the effective management of Sierra Leone's natural resources

The project will build new partnerships and improve the existing ones for the coordination of efforts for the better management of the country's abundant natural resources. UNDP acknowledges the role of various MDAs and private sectors in development processes; therefore, the portfolio has identified relevant partners including private sectors who will be collaborating in the implementation of the portfolio interventions. The portfolio will also work with the CO Procurement Unit who will provide guidance into the procurement processes of all Portfolio equipment and materials relevant for achieving the various outputs.

b) Strengthened national early warning system to promote disaster preparedness and address climate change related hazards for the effective management of the country's natural resources

Despite support to the relevant government MDA through the Climate Information and Early Warning project, climate data collection and dissemination remains a critical challenge to the country. Data is critical for effective natural resources and environmental management. However, the limited availability of data has affected the country in adequately reporting climate change, environment and natural resources management information at national, regional and global levels. Providing support to key national institutions to carry out research and develop innovative approaches on natural resource management will improve on data availability and subsequent provision of key reports such as the state of environment report, national adaption programme for action etc. The support will also help in the establishment of formal networks and communities of practice on NRM.

This portfolio will improve the early warning system in the country, by supporting regular collection and dissemination of early warning data/information and capacity building of early warning focal persons at NPAA, EPA, ONS, NWRMA, MAF, Farmers, Meteorological Agency, Fishing communities on early warning data collection initiatives, Also, the establishment of a coordinated NRM data base system in related partner institutions viz. NPAA, EPA, ONS, NWRMA, MAF, and Meteorological Agency for mitigation measure which will increase resilience of the country to climate related risks and improve natural resources management.

c) Enhanced policy, legal and regulatory framework for the effective management of natural resources

Although significant strides have been made in developing a solid institutional base for natural resource and environmental governance, there is still room for improvement especially in areas such as capacity building, policies and regulatory framework. The project intervention seeks to improve the governance and management of natural resource to ensure measurable and sustainable improvements in the environment and living conditions of vulnerable Sierra Leoneans through enabling policy frameworks, partnerships and capacities for action for a more equitable access to and return on benefit from the country's natural resources. The provision of technical support for the development and review of policies and regulations on protected areas (through this portfolio) will enhance the capacity of the relevant institution for effective decision making and regulatory enforcement and enhance innovative/alternative livelihood initiatives and mainstreaming gender as well as enhancing effective participation of local communities.

d) Economically empowered communities, including women, youth and PWDs through alternative livelihood options.

Demand for land for economic development and pressures from population growth are creating unprecedented land use changes. This is evidenced in diminishing forest cover, for instance between 1990 and 2000 the country lost 36,000 hectares of forest cover annually leading to 3 percent forest cover change[3]. Providing advisory and financial services for the establishment of woodlots in forest edge communities, restoration of mangroves in coastline areas and restoration of water catchment areas in highly degraded areas including the support to reclamation of mined out communities will help in the restoration of the natural environment and the maintenance of ecosystem services.

e) Increased national awareness on natural resource management

The low level of awareness and appreciation of natural resources management and environmental protection issues, particularly among mining, manufacturing industries, tourism, urban development, agriculture, water resources and other related sectors, increases the cost of monitoring and enforcement for effective management of the environment and its natural resources. Awareness rising on NRM initiatives in forest edge, water resources, mining & coastal communities and capacity building initiatives on effective use of Natural resources will enhance a best practice natural resources and environmental management across the different sectors.

f) Monitoring and Coastal Surveillance Capability of the SLMA enhanced. Supporting the SLMA with capacity building, including trainings and equipment will strengthen its capacity to patrol and conduct surveillance activities in the territorial waters of Sierra Leone thereby boosting the chances of developing and harnessing the blue economy for the benefit of the country.

Resources Required to Achieve the Expected Results

- An estimated cost of Eleven million and six hundred twenty thousand US dollars ($11,620,000) is required for the outlined activities. Support will be galvanized from other development partners such as the Global Environment Facility medium size project, like building and strengthening Sierra Leone's national capacity to implement the transparency elements of the Paris Agreement. The portfolio will continue to seek funding from GEF, EU, GIZ and other international and national funding windows to support the implementation of the outlined activities.
- Technical and human resources capacity is required to facilitate the implementation of these activities. Consultancy services will be required to support the development/review of policies and regulations for the effective management of the environment and its natural resources. A State-of-the-art equipment, including, standard computers and GIS accessories will be required to facilitate effective data collection and dissemination for informed decision making. Standard environmental monitoring equipment is also required to facilitate research in the field of natural resources management and environmental conservation.

Partnerships

- The portfolio will promote institutional cooperation and partnership to enhance capacity building as well as contribute to natural resources management. Relevant MDAs in protection and regulatory sectors of environment and natural resources management will be mobilized and engaged to take the lead in ensuring that the environmental and its resources on which the country depend (water, biomass, biodiversity, soil, minerals...) are sustainably managed and consistent with environmental sustainability principles in line with National and International regulatory frameworks. We will foster global partnership with GEF, GCF, UNEP, and UNFCCC among others to facilitate collaboration and strengthen national and global linkages. This will help to effectively mobilize, provide technical and financial supports for the implementation of the environment and natural resources management strategies, preferably through resource pooling.

[3] State of the Environment Report for Sierra Leone - July 2015.

- Partnering with national civil society organizations (CSOs) will help shape natural resources and environmental policies and programs. They will also hold governments accountable for their duty to fulfil the right to a safe and sound environment. At local levels, we will work with district authorities to prioritize environment and natural resources management issues, as most districts are dependent on environmental resources but also vulnerable to climate change and environmental challenges. They will integrate strategic environmental management principles into their District Development Plans (DDPs) and mobilize additional resources to finance environmental investments in their localities. They will, within their capacity limitations, ensure environmental compliance by all development projects in their localities.
- In addressing climate resilient catchment-based water resources management, UNDP will support NWRMA in the development of policies and regulatory framework that will provide the legal and technical guidance and direction that will support the management, protection, and regulation of water resources in Sierra Leone. UNDP will also support the identification and mapping of watersheds, catchment and sub-catchment areas that are in critical danger and support restorative measures as means of protecting the ecosystems in partnership with Catholic Relief Services CRS and Africa Development Bank (AfDB). The protection and restoration of water catchments areas will enhance the delivery of clean and safe water for both human and the ecosystems and will also improve on the well-being of the people of Sierra Leone. This in turn will help reduce surface runoffs and thus mitigate against floods and disasters. This support will strengthen the existing partnership with AfDB and will provide new partnership opportunities with the Catholic Relief Services (CRS).
- Based on the principles of integrated water resources management approach and the associated climate change and adaptation and/ or mitigation measures, UNDP will support the development of a water resources management master plan mainstreaming gender concerns in water resources management. Since NWRMA is a newly established institution, the need to popularise the Agency through community engagement and awareness raising is key in the management of water resources, hence UNDP will support the Agency in developing and implementing its communication strategy.

- On disaster risk management UNDP will be partnering with the World Bank. World Bank have contracted the services of Steadman Global consortium to do capacity needs assessment in readiness for the establishment of the national disaster agency. The world bank has also set aside funding for three years to support the Agency with salaries of staff, construction of warehouses and the procurement of equipment.

- Additionally, the World Bank and ECOWAS have also provided funds to conduct national simulation exercises as part of capacity development to test the country's preparedness and response plans. However, there are still gaps in the area of national and sub national capacity in preparedness and response to disasters. UNDP will therefore fund preparedness systems in place at community level to mitigate the impact of natural and man-made disasters the prepared and can respond when disasters strike.

- The Government of Sierra Leone through the Ministry of Lands Housing and Country will deliver on the land reform program in collaboration Traditional Leaders, Local Authorities, CSOs, MDAs, Universities and Development partners. Specifically, Collaborations will be established with DFID, Irish Aid, The German Government, FAO and World Bank in the DPs arena, and with DFID, WHH, Green Scenery, NAMATI, United for the Protection of Human Rights, Land 4 Life Consortium, WANEP among others on the CSOs arena.
- On the Building Renovation activity, the Ministry of Lands will collaborate with the Ministry of Works and Public Asset to assess the building structure and preparation of architectural drawings with Technical support.
- Digitising and Archiving System Development may be able to be built upon the SOLA system used by FAO in their pilot work, but this will need to be analysed. Delivering on this activity will require working in collaboration with the office of the Registrar and Administrator General (OARG) with Technical support from FAO and the Bank.

Risks and Assumptions

The project implementation, as captured in the theory of change, is likely to encounter the following risks:

a) Inadequate financing due to difficulties in mobilizing resources required to implement all planned activities of the project;
b) Natural disasters including diseases such as COVID-19 may deter full implementation of project envisaged activities
c) Political interference during the implementation, politicians may utilize the project for their political capital;
d) Full participation and engagement in project activities by the targeted young people. There might be resistance by the youth to take up the employment opportunities options made available as well as engaging in training programmes. This is particularly to youth at risks, those previously in gangs and cliques;
e) Capacity of responsible partners may affect project execution;
f) Economic stability in the country may affect the targeted MSMEs growth to create employment opportunities for youth.

The following are mitigation measures:

a) Resource mobilization efforts to seek external funding from potential partners, cost sharing arrangements with Government;
b) Continuous engagement with various stakeholders during implementation to sensitize them on disasters, putting in place contingence measures among others. Specific to COVID-19, continuous sensitization to target communities to adhere to Government guidelines and Standard Operating Procedures for the pandemic;
c) Orientation and continuous support for readiness of targeted youth to take up the opportunities. This will be complemented by social services including psychosocial support;
d) Incorporate capacity development activities for responsible partners in the project plans;

Stakeholder Engagement

Stakeholders of this programme are all actors with an interest and role in environment and the broader social, economic, and governance issues to which it is linked, in particular those with connections to the natural resources. These include public administrations at both national and sub- national levels, NGOs, civil society, and the private sector. Stakeholders include all those who are also parties to the Multilateral Environmental Agreements.

Stakeholder engagement for the portfolio will be facilitated through the communication, outreach and dissemination strategy at national and sub-national levels. At the national level, the UNDP aims to facilitate partnerships for cooperation on NRM, DRR and water resources issues from a broad range of stakeholders from the government, civil society and private sector. At the national level, the main objectives are strengthening partnerships between public and private sectors, civil society and enhancing the engagement of the private sector and civil society on natural resources, disaster management and water resource issues.

Stakeholders	Proposed Engagement Strategy
MDAs	Active partnerships will be established to implement planned activities. Relevant MDAs will also serve on portfolio board and be able to provide strategic guidance and direction on portfolio

	implementation plans.
Private sector entities	Increase awareness about the potential and concrete opportunities for investments in NRM, DRR and WRM sectors. Actively engage private sector entities in Sierra Leone in portfolio related events, training programmes and activities.
Civil Society	National and local NGOs and Community Based Organizations will be engaged in activities under the portfolio to develop specific solutions in NRM, DRR and WRM that aim to positively impact women groups, vulnerable groups, youth and local communities.
Research, Academia and National experts	Strengthen the capacity of research institutions, academic institutions and national experts by close engagement in all activities, dedicated workshops and working to support national academic and civil service curricula on NRM, DRR and WRM.

South-South and Triangular Cooperation (SSC/TrC)

The UNDP's network of country offices and the regional service centre for Africa will be used to enable South-South and triangular cooperation for NRM, DRR and water knowledge, best practices and capacity development skills. Regional economic and political communities such as ECOWAS and MRU will also be used for sharing knowledge, skills and best practices. The outreach and training interventions that are integrated into activities will also consider opportunities for south-south and triangular cooperation.

Knowledge

Knowledge Management will be a core function of the portfolio, utilising several global knowledge platforms and products available with UNDP. The UNDP Sierra Leone website will have a dedicated page to provide updates on the activities and outputs under the portfolio and capture and share all main products, data and news stories emerging from MDAs and other partners. When specific milestones have been reached, opportunities to create narratives and develop stories around Sierra Leoneans who are direct beneficiaries of the activities will be leveraged through the communications team at UNDP Sierra Leone through the use of leaflets, blogs, videos, and news items. Other platforms will also be utilized for dissemination of portfolio results, including UNDP's Sustainable Development Finance Platform, the Biodiversity and Ecosystem Network (BES-NET), the National Biodiversity Strategy Action Plan (NBSAP) forum, all of which host a selection of resources related to NRM, DRR and water related resources. Use of social media platforms such as twitter, facebook, Instagram etc. will be used to share knowledge products widely.

Sustainability and Scaling Up

The NRM portfolio is consistent with /in tandem with the Medium-Term National Development plan 2019-2023 which has an overarching goal of human capital development. This link is therefore crucial for transitional arrangements and sustainability of the NRM portfolio This implies that the sectors contained in this portfolio should on a quarterly basis receive funds from the consolidated revenue fund. Additionally, the basis of national ownership has been created since the inception of the project, technical staff of the various MDAs in the portfolio have played critical roles in the design of the portfolio documents. This is an indication of ownership of portfolio document.

IV. PROJECT MANAGEMENT

Cost Efficiency and Effectiveness

The project will be implemented using a portfolio model as part of the Sustainable and Local Economic Development cluster to optimize on available resources available. Capacities within the cluster will be utilized for effective delivery on available resources. The project will also leverage

resources from other initiatives and projects within the UNDP country office. The UNDP Sierra Leone is among the clustered countries for common services. This clustering arrangement will be utilized in procurement, payment for goods and services among others for efficient delivery. Furthermore, working with other UN Agencies such as UNICEF and UNFPA, exiting Long-term Agreements will be used to solicit goods and services as may be required by the NRM portfolio.

Project Management

The proposed project will be part of the Sustainable and Local Economic Development Cluster of UNDP Sierra Leone. UNDP will have a designated Programme Specialist based at the Country Office as the Portfolio manager for tor the Natural Resource Management, Climate Change Mitigation, Adaptation and Disaster Resilience project. He/she will be supervised by the SLED team leader.

Responsible Parties including the Ministry of Environment, Ministry of Land, Housing and Country Planning (MLHCP), National Protected Area Authority (NPAA), Ministry of Mines and Mineral Resources (MMMR), Environmental Protection Agency (EPA), Ministry of Fisheries and Marine Resources (MFMR), Ministry of Water Resources (MWR), Sierra Leone Maritime Administration (SLMA), National Disaster Management Agency(NDMA), Sierra Leone Meteorological Agency (SL-MET), Forestry Division, Ministry of Agriculture and Forestry (MAF), National Water Resources Management Agency (NWRMA), and National Minerals Agency (NMA). Each of these will recruit (or assign) project managers and will be tasked with the day to day management of project outputs as applicable to the entities. They will all be reporting to the Portfolio manager as appropriate. Throughout the implementation of the project, the country office will work closely with UNDP Regional Service Centre for technical oversight and guidance.

The daily implementation will be the responsibility of the Portfolio Manager on behalf of the portfolio Board. The Portfolio Manager's prime responsibility will be to ensure that the project produces the results specified in the project document, to the required standard of quality and within the specified time and cost. The Portfolio Manager will seek overall guidance from the team leader and work closely with the technical specialists as appropriate.

V. RESULTS FRAMEWORK[4]

Intended Outcome as stated in the UNDAF/Country Programme Results and Resource Framework: By 2023, Sierra Leone benefits from a more productive, commercialized and sustainable agriculture, improved food and nutrition security, and increased resilience to climate change and other shocks
Outcome indicators as stated in the Country Programme Results and Resources Framework, including baseline and targets: 1.2.1: % increase in forest cover. B: 42.98% (2016) T: 48% (2023) 1.2.3: Area of degraded land restored /reclaimed/rehabilitated B: 0 Ha. T: 1,000 Ha. 1.2: Area (hectares) of wetlands restored B: 0 hectares T: 500 hectares 1.4: Proportion of people practising disaster preparedness and response systems, disaggregated by sex B: 0% T: 40% (Males 20%, Females 20%)

[4] UNDP publishes its project information (indicators, baselines, targets and results) to meet the International Aid Transparency Initiative (IATI) standards. Make sure that indicators are S.M.A.R.T. (Specific, Measurable, Attainable, Relevant and Time-bound), provide accurate baselines and targets underpinned by reliable evidence and data, and avoid acronyms so that external audience clearly understand the results of the project.

Applicable Output(s) from the UNDP Strategic Plan: Signature 4: Promote nature-based solutions for sustainable planet & Signature 3: Enhance National Prevention and recovery capacities for resilience society

DocuSign Envelope ID: F471CBEC-36C5-4403-BF17-80943E9BD9BC

VI. MONITORING AND EVALUATION

In accordance with UNDP's programming policies and procedures, the project will be monitored through the following monitoring and evaluation plans: *[Note: monitoring and evaluation plans should be adapted to project context, as needed]*

Monitoring Plan

Monitoring Activity	Purpose	Frequency	Expected Action	Partners (if joint)	Cost (if any)
Conduct regular monitoring on activity implementation	Progress data against the results indicators in the RRF will be collected and analysed to assess the progress of the project in achieving the agreed outputs.	Quarterly	Slower than expected progress will be addressed by project management.		
Monitor and Manage Risk	Identify specific risks that may threaten achievement of intended results. Identify and monitor risk management actions using a risk log. This includes monitoring measures and plans that may have been required as per UNDP's Social and Environmental Standards. Audits will be conducted in accordance with UNDP's audit policy to manage financial risk.	Quarterly	Risks are identified by project management and actions are taken to manage risk. The risk log is actively maintained to keep track of identified risks and actions taken.		
Learn	Knowledge, good practices and lessons will be captured regularly, as well as actively sourced from other projects and partners and integrated back into the project.	At least annually	Relevant lessons are captured by the project team and used to inform management decisions.		
Annual Project Quality Assurance	The quality of the project will be assessed against UNDP's quality standards to identify project strengths and weaknesses and to inform management decision making to improve the project.	Annually	Areas of strength and weakness will be reviewed by project management and used to inform decisions to improve project performance.		
Review and Make Course Corrections	Internal review of data and evidence from all monitoring actions to inform decision making.	At least annually	Performance data, risks, lessons and quality will be discussed by the project board and used to make course corrections.		

Project Report	A progress report will be presented to the Portfolio Board and key stakeholders, consisting of progress data showing the results achieved against pre-defined annual targets at the output level, the annual project quality rating summary, an updated risk long with mitigation measures, and any evaluation or review reports prepared over the period.	Annually, and at the end of the project (final report)			
Portfolio Review (Portfolio Board)	The project's governance mechanism (i.e., project board) will hold regular project reviews to assess the performance of the project and review the Multi-Year Work Plan to ensure realistic budgeting over the life of the project. In the project's final year, the Project Board shall hold an end-of project review to capture lessons learned and discuss opportunities for scaling up and to socialize project results and lessons learned with relevant audiences.	Annually	Any quality concerns or slower than expected progress will be discussed by the project board and management actions agreed to address the issues identified.		

Evaluation Plan[6]

Evaluation Title	Partners (if joint)	Related Strategic Plan Output	UNDAF/CPD Outcome	Planned Completion Date	Key Evaluation Stakeholders	Cost and Source of Funding
Mid-Term Evaluation and End of Portfolio Evaluation		Signature 4: Promote nature-based solutions for sustainable planet & Signature 3: Enhance National Prevention and recovery capacities for resilience society	By 2023, Sierra Leone benefits from a more productive, commercialized and sustainable agriculture, improved food and nutrition security, and increased resilience to climate change and other shocks	Mid-term Evaluation: mid 2022 End of Portfolio evaluation: 2023	UNDP, Ministry of Environment, EPA, National Protected Area Authority	US $50,000 – Mid-term evaluation US $50,000: End of portfolio Evaluation Source: UNDP

[6] Optional, if needed

VII. MULTI-YEAR WORK PLAN [78]

EXPECTED OUTPUTS	PLANNED ACTIVITIES	Planned Budget by Year			RESPONSIBLE PARTY	PLANNED BUDGET		
		2021	2022	2023		Funding Source	Budget Description	Amount
Output 1: Relevant MDAs have strengthened capacities to enforce inclusive regulations and gender responsive policies on conservation of protected areas in Costal and Urban planning and Development *Gender marker: GEN 2*	1.1: Support the development/review of policies and regulations regarding natural resources including protected areas, water resources, terrestrial and coastal areas.	120,000	130,000	100,000	EPA, NWRMA	GEF & UNDP	consultancies	350,000
	1.2: Develop National Spatial Development framework	50,000	0	0	MLHCP	UNDP	Consultancies and workshops	50,000
	1.3: Review and validate the enactment of the new town and Country Planning Act.	50,000	0	0	MLHCP	UNDP	Consultancies & workshops	50,000
	1.4: Mapping degraded areas and restoration of degraded wetlands and protected areas.	100,000	100,000	50,000	UNDP	GEF	Consultancies & workshops	250,000
	1.5: Support review of current marine use planning policies and guidelines	20,000	0	0	UNDP	GEF	consultancy	20,000

[7] Cost definitions and classifications for programme and development effectiveness costs to be charged to the project are defined in the Executive Board decision DP/2010/32

[8] Changes to a project budget affecting the scope (outputs), completion date, or total estimated project costs require a formal budget revision that must be signed by the project board. In other cases, the UNDP programme manager alone may sign the revision provided the other signatories have no objection. This procedure may be applied for example when the purpose of the revision is only to re-phase activities among years.

	1.6: undertake a gender aware gap analysis of national development plans and policies (including the EIA procedures) to determine existing institutional frameworks for protected areas and fisheries management (portfolios, responsibilities and linkages).	20,000	0	0	EPA, NPAA	TRAC	consultancy	20,000
	1.7: Development of options for Marine Spatial Plan governance arrangements (including cost effectiveness, investment and budget requirements, human and technological capacity, institutional integration, and legislative and policy coherence etc)	30,000	0	0	UNDP	GEF	Consultancy	30,000
	1.8: Preparation of a draft gender aware implementation plan based on the selected governance structure with stakeholder input	50,000	0	0	UNDP	GEF	Workshops	50,000
	1.9: Develop a regulatory and policy framework for climate change at national and district levels including review of National Environmental policy	50,000	0	0	EPA	UNDP	Consultancies & workshops	50,000
	1.20: Review the Nationally Determined Contributions (NDC's) to reflect the current challenges on climate action facing the Country.	140,000	0	0	EPA	CP	Consultancy & workshops	140,000

	1.21: Capacitate the NWRMA for the effective management and protection of the water resources.	80,000	80,000	80,000	NWRMA	UNDP	Consultancy &workshop	240,000
	Sub Total – Output 1							**1,250,000**
Output 2: Capacity of MDAs in NRM at national and local levels strengthened to ensure sustainable use of environmental resources including livelihoods *Gender marker: GEN 2*	2.1: Raise public awareness campaign on NRM	30,000	35,000	35,000	EPA-SL, NWRMA	UNDP	workshops	100,000
	2.2: Develop robust data-based management system to inform NRM policy development and for mitigation measures	40,000	40,000	0	EPA-SL	UNDP	Consultancies & workshop	80,000
	2.3: Support innovation/ research to build linkages among research Institutions.	30,000	35,000	0	EPA-SL	UNDP	Consultancies & workshops	65,000
	2.4: Establish formal networks and communities of practice on NRM (e.g Community Co. Management Committees).	50,000	0	0	EPA-SL	UNDP	Workshops	50,000
	2.5: Support agro-finance institutions to increase access to rural financing	100,000	100,000	100,000	EPA-SL	UNDP	Workshops	300,000
	2.6: Support Institutional capacity building in Natural Resource mapping and community base sustainable NRM initiatives	130,000	100,000	100,000	EPA-SL, NWRMA	UNDP	Training	330,000
	2.7: Rehabilitate and reclaim mined-out/degraded lands into viable land use	100,000	400,000	400,000	MMMR	UNDP	Goods and services	900,000
	2.8: Support community-based forest management and demarcation of protected areas;	150,000	150,000	150,000	NPAA, NWRMA	GEF	Goods and services	450,000

	2.9: Demonstration of integrated Land Management in the Western Area peninsula	1,000,000	1,00,000	1,000,000	MOE, EPA, NPAA & NGO's	GEF	Goods and services	3,000,000
	Sub Total – Output 2							**5,275,000**
Output 3: Preparedness systems in place at community level to mitigate the impact of natural and man-made disasters *Gender marker: GEN 2*	3.1: support the effective operation of Disaster management agency	30,000	35,000	35,000	UNDP	UNDP	Equipment's & Training	100,000
	3.2: support the establishment of chiefdom disaster management committees	75,000	75,000	50,000	DMA	UNDP	Workshops	200,000
	3.3: Review the SOP handbook and conduct training of CDMCs on DRM governance	75,000	75,000	50,000	DMA	UNDP	Workshops	200,000
	3.4: Monitor and lobby Ministry of education for its integration into the school curriculum.	10,000	10,000	0	DMA	TRAC	Workshops	20,000
	3.5: Provide training for focal points in relevant MDAs on mainstreaming DRM into their development agendas	25,000	25,000	0	UNDP, ONS	TRAC	Training	50,000
	3.6: Conduct national simulation exercise based on scenarios	30,000	40,000	40,000	DMA	TRAC	Workshops	110,000
	3.7: Develop & Maintain database for early warning information and dissemination	60,000	0	0	SLMA, NWRMA	GEF	Works & Equipment's	60,000
	3.8: Support institutional capacity development of target MDAs to carry out Climate and marine forecasting	50,000	50,000	50,000	SLMA	GEF	Training	150,000

	3.9: Develop Early Warning mechanisms and support stakeholders with information technology for receiving EW messages	45,000	45,000		SLMA	GEF	Training	90,000
	Sub Total – Output 3							**980,000**
Output 4: Vulnerable communities in targeted districts are enabled to harvest safe, clean and drinkable rainwater *Gender marker: GEN 2*	4.1: Establishment of five water facilities in the eight UNDP programmatic districts	400,000	1,000,000	1,000,000	MWR, NWRMA,LCs	UNDP	Construction	2,400,000
	4.2: Training of water management committees and development of business plans.	50,000	50,000	50,000	MWR, NWRMA, LCs	UNDP	Training	150,000
	Sub Total – Output 4							**2,550,000**
Output 5: National Strategic framework of the blue economy is in place to accelerate Ocean based development and economic diversification at both national and community levels *Gender marker: GEN 2*	5.1: Conduct stakeholder analysis of the blue economy	50,000	0	0	SLMA	UNDP	Consultancy	50,000
	5.2: Conduct stakeholder engagement at both national and District levels on the blue economy initiative	50,000	50,000	0	SLMA	UNDP	Workshop	100,000
	5.3: Establish an expert multi-stakeholder working group to spearhead the development of the National Strategic framework	0	30,000	0	SLMA	UNDP	Consultancy	30,000
	5.4: Hire a consultant to carry out an overall assessment or situation analysis of the blue economy to foster an evidence based National strategic framework development	0	30,000	0	SLMA	UNDP	Consultancy	30,000

	5.5: Organise stakeholder workshop to discuss and validate the outcome of the assessment conducted on the blue economy.	0	30,000	0	SLMA	UNDP	Workshops	30,000
	5.6: Facilitate formulation of the National strategic framework of the blue economy	60,000	0	0	SLMA	UNDP	Workshop	60,000
	5.7: Organise a National validation workshop for Draft framework document	0	20,000	0	SLMA	UNDP	Workshop	20,000
	5.8: Popularization of the completed National strategic framework document	0	0	50,000	SLMA	UNDP	Workshop	50,000
	Sub Total – Output 5							**370,000**
Evaluation	Conduct a mid and end of portfolio evaluation	50,000	0	50,000	UNDP	UNDP	Consultancies	100,000
Project Implementation, Oversight, and Coordination	Project Staff, common premise, equipment cost, and monitoring	200,000	200,000	200,000	UNDP & Partners	UNDP	Staff cost, Equipment's	600,000
Direct Project Cost	Direct project costs							495,000
TOTAL								**11,620,000**

VIII. GOVERNANCE AND MANAGEMENT ARRANGEMENTS

Portfolio Board:

The Portfolio Board is tasked with the responsibility of providing an oversight for the implementation of activities and the achievement of targets. On top of that the board role is also to review and approve the Annual Work Plan activities for subsequent implementation. The Board will be chaired by the Implementing Agency representative among MDAs

The Board will: -

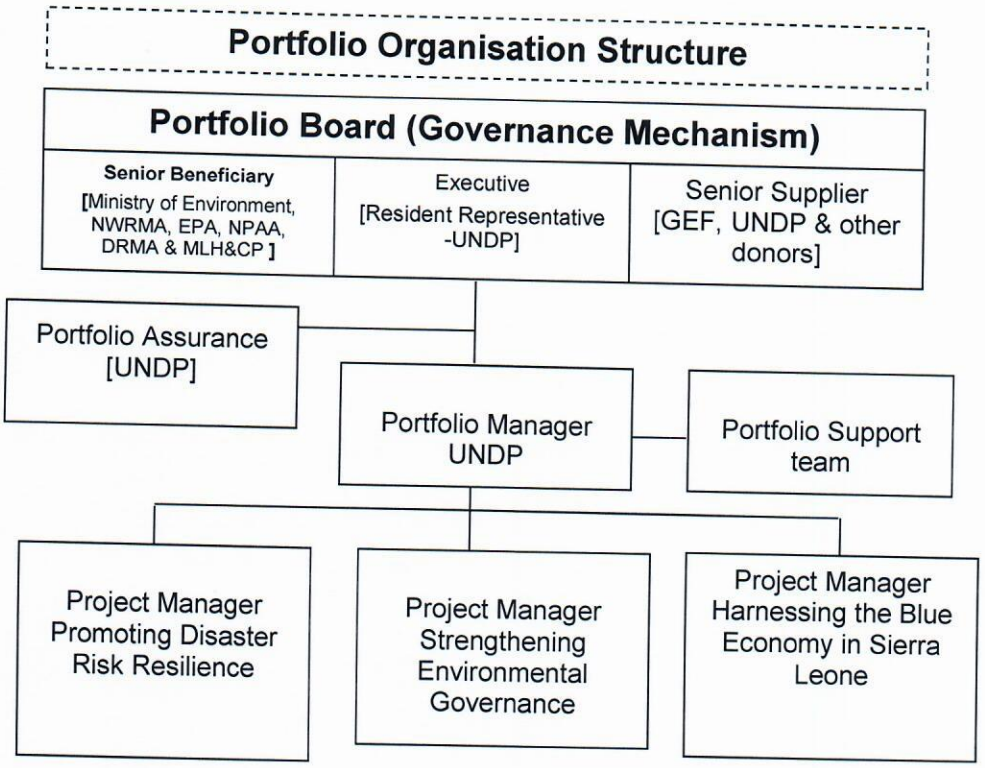

- review the implementation of the activities set out in the Annual Work Plans
- Oversee and take stock of the project activities.
- review and make recommendations on revisions to the annual work plan
- review and make recommendations on the funding of the project
- review progress on the programme outputs
- recommend any necessary changes to the programme
- Act a clearing house for the Annual Work Plans

The Project Board will meet at least two times in a year to discuss the annual work plans and also discuss project successes and challenges in the middle of the year or at the end to determine successes. However, meetings can be held for more than two times a year if there are issues that needs to be discussed by the board during the year.

Project Implementation Management:

This Portfolio will be headed by a Portfolio Manager who will directly report to the SLED Team Lead and each project will be managed a project Manager. They will be responsible for the day to day implementation of the project activities. Evaluate both narrative and financial report of the projects including monitoring the activities under implementation. The Project Manager provides feedback to the board in terms of the implementation of the project activities. The Project Manager's prime responsibility will be to ensure that the project produces the results specified in the project document, to the required standard of quality and within the specified time and cost.

- results of capacity assessment of implementing partner
- UNDP Support Services (if any)
- collaborative arrangements with related projects (if any)
- prior obligations and prerequisites
- a brief description/summary of the inputs to be provided by all partners
- audit arrangements
- agreement on intellectual property rights and use of logo on the project's deliverables

IX. LEGAL CONTEXT

This project document shall be the instrument referred to as such in Article 1 of the Standard Basic Assistance Agreement between the Government of Sierra Leone and UNDP, signed on 21 December, 1977. All references in the SBAA to "Executing Agency" shall be deemed to refer to "Implementing Partner."

This project will be implemented by the United Nations Development Programme ("Implementing Partner") in accordance with its financial regulations, rules, practices and procedures only to the extent that they do not contravene the principles of the Financial Regulations and Rules of UNDP. Where the financial governance of an Implementing Partner does not provide the required guidance to ensure best value for money, fairness, integrity, transparency, and effective international competition, the financial governance of UNDP shall apply.

X. RISK MANAGEMENT

1. UNDP is the Implementing Partner and will comply with the policies, procedures and practices of the United Nations Security Management System (UNSMS.)

2. UNDP as the Implementing Partner will undertake all reasonable efforts to ensure that none of the [project funds][9] [UNDP funds received pursuant to the Project Document][10] are used to provide support to individuals or entities associated with terrorism and that the recipients of any amounts provided by UNDP hereunder do not appear on the list maintained by the Security Council Committee established pursuant to resolution 1267 (1999). The list can be accessed via http://www.un.org/sc/committees/1267/aq_sanctions_list.shtml. This provision must be included in all sub-contracts or sub-agreements entered under this Project Document.

3. Social and environmental sustainability will be enhanced through application of the UNDP Social and Environmental Standards (http://www.undp.org/ses) and related Accountability Mechanism (http://www.undp.org/secu-srm).

4. UNDP as the Implementing Partner will: (a) conduct project and programme-related activities in a manner consistent with the UNDP Social and Environmental Standards, (b) implement any management or mitigation plan prepared for the project or programme to comply with such standards, and (c) engage in a constructive and timely manner to address any concerns and complaints raised through the Accountability Mechanism. UNDP will seek to ensure that communities and other project stakeholders are informed of and have access to the Accountability Mechanism.

5. In the implementation of the activities under this Project Document, UNDP as the Implementing Partner will handle any sexual exploitation and abuse ("SEA") and sexual harassment ("SH") allegations in accordance with its regulations, rules, policies and procedures.

[9] To be used where UNDP is the Implementing Partner

[10] To be used where the UN, a UN fund/programme or a specialized agency is the Implementing Partner

6. All signatories to the Project Document shall cooperate in good faith with any exercise to evaluate any programme or project-related commitments or compliance with the UNDP Social and Environmental Standards. This includes providing access to project sites, relevant personnel, information, and documentation.

7. UNDP as the Implementing Partner will ensure that the following obligations are binding on each responsible party, subcontractor and sub-recipient:

   a. Consistent with the Article III of the SBAA *[or the Supplemental Provisions to the Project Document]*, the responsibility for the safety and security of each responsible party, subcontractor and sub-recipient and its personnel and property, and of UNDP's property in such responsible party's, subcontractor's and sub-recipient's custody, rests with such responsible party, subcontractor and sub-recipient. To this end, each responsible party, subcontractor and sub-recipient shall:
      i. Put in place an appropriate security plan and maintain the security plan, considering the security situation in the country where the project is being carried;
      ii. Assume all risks and liabilities related to such responsible party's, subcontractor's and sub-recipient's security, and the full implementation of the security plan.

   b. UNDP reserves the right to verify whether such a plan is in place, and to suggest modifications to the plan when necessary. Failure to maintain and implement an appropriate security plan as required hereunder shall be deemed a breach of the responsible party's, subcontractor's and sub-recipient's obligations under this Project Document.
   c. In the performance of the activities under this Project, UNDP as the Implementing Partner shall ensure, with respect to the activities of any of its responsible parties, sub-recipients and other entities engaged under the Project, either as contractors or subcontractors, their personnel and any individuals performing services for them, that those entities have in place adequate and proper procedures, processes and policies to prevent and/or address SEA and SH.

   d. Each responsible party, subcontractor and sub-recipient will take appropriate steps to prevent misuse of funds, fraud or corruption, by its officials, consultants, subcontractors and sub-recipients in implementing the project or programme or using the UNDP funds. It will ensure that its financial management, anti-corruption and anti-fraud policies are in place and enforced for all funding received from or through UNDP.

   e. The requirements of the following documents, then in force at the time of signature of the Project Document, apply to each responsible party, subcontractor and sub-recipient: (a) UNDP Policy on Fraud and other Corrupt Practices and (b) UNDP Office of Audit and Investigations Investigation Guidelines. Each responsible party, subcontractor and sub-recipient agrees to the requirements of the above documents, which are an integral part of this Project Document and are available online at www.undp.org.

   f. In the event that an investigation is required, UNDP will conduct investigations relating to any aspect of UNDP programmes and projects. Each responsible party, subcontractor and sub-recipient will provide its full cooperation, including making available personnel, relevant documentation, and granting access to its (and its consultants', subcontractors' and sub-recipients') premises, for such purposes at reasonable times and on reasonable conditions
