Brief Description

After the stipulation of the Presidential Regulation on Carbon Pricing (No. 98 of 2021) in October 2021, there is an urgent need to prepare the corresponding regulations, guidelines and the stakeholders for implementing market-based climate change mitigation. The project will focus on the development of ETS and greenhouse gas (GHG) Crediting Instrument (Domestic Offset Program), supporting the preparation of operational rules and guidelines that are necessary to enable the implementation of carbon pricing instruments; strengthening the institutional capacity; improving GHG data collection, validation and verification as well as building robust registry systems. Improving the GHG Measurement, Reporting and Verification (MRV) system will not only contribute to market readiness but also serve to meet Enhanced Transparency Framework requirements, in order to track NDC progress and prepare for the first Biennial Transparency Report, to be submitted no later than the end of 2024.

Agreed by UNDP: DocuSigned by: Norimasa Shimomura 4B63DD0498CD41A...

DocuSign Envelope ID: BAA2B003-5CB6-44E5-90F7-D53ECE9F418A

I. PURPOSE AND EXPECTED OUTPUT

1.1 Development Challenge

Indonesia is among the world's top 10 emitters. At the 26th UN Climate Change Conference of the Parties (COP26), Indonesia committed carbon neutral of forest and other land use sector by 2030 and phase-out of coal-fired power plants by 2040 with sufficient financial support. The country's large rainforests and a coal-reliant power sector means that immediate and effective action by Indonesia will create major impact on the achievement of the Paris Agreement. To meet the current Nationally Determined Contributions (NDC) mitigation target, Indonesia will need a significant investment of around IDR 3,000 trillion or around USD 214 billion (Indonesia 2nd Biennial Update Report (BUR)). The financing needs cannot be borne by the government budget alone. Non-Party stakeholders (NPS) participation and investment need to be mobilized urgently. This is the expected role of Carbon Pricing Instrument (CPI) implementation in Indonesia, whereby putting a price on carbon can help scale up climate change mitigation in a cost-effective manner. The Government of Indonesia relies heavily on the results of CPI's implementation to fill in the budget gap in achieving NDC targets, and CPI is the widely anticipated source of funding to incentivize future increase in mitigation ambition. Without CPI, the discrepancy between the committed GHG reduction goal and the existing financing plan cannot be solved.

The Presidential Regulation on Carbon Pricing (No. 98 of 2021) was stipulated on October 29, 2021. Preparations for implementing carbon pricing measures in Indonesia (emissions trading scheme-ETS, crediting scheme, performance-based payment-PBP) must keep up to pace. The following immediate supporting regulatory, technical framework as well as institutional capacity must be in place for the CPI to function effectively:

(1) Several operational rules and guidelines are necessary to enable the implementation of carbon pricing instruments and to ensure the implementation is inclusive. These policies must be set in a way that is robust yet flexible for future adjustments.
(2) Carbon pricing instruments' design and implementation are relatively new subject for most of the government officers. Yet allocated budget for carbon pricing development is still minimal. Therefore, there is a pressing need to increase the institutional capacity if carbon pricing implementation is to be accelerated.
(3) Carbon pricing implementation requires robust data quality assurance and control that will require many specific technical capacities such as GHG data collection, validation and verification, as well as designing and operating robust registry systems. These capacities should be developed in parallel with the instruments' development. Early investment in this component will also prepare Indonesia to meet the modalities, procedures and guidelines of the Enhanced Transparency Framework (ETF) as it begins to assemble information necessary to track progress made in implementing and achieving its NDC.
(4) Carbon pricing communication must be extended to wider stakeholders, in particular those who are targeted to be covered by the instruments such as the private sector in targeted sectors. Communication strategy has to be developed carefully to ensure that industries can understand the instruments and its benefit to them.
(5) Recent issuance of carbon tax regulation under Tax Harmonization Law (October 7, 2021) increases the importance of emission cap setting in the energy sector. The carbon tax can lead the mandatory implementation of emission cap.

These immediate supports need to be addressed urgently so that the CPI can meet its objective to finance NDC implementation while raising future mitigation ambition.

1.2 Strategy

Based on the current projection, the Government requires a budget of around USD 322.86 billion for the implementation of mitigation actions in the NDC roadmap[1]. Based on the findings of Indonesia Climate

[1] Updated NDC of Indonesia, see https://www4.unfccc.int/sites/ndcstaging/PublishedDocuments/Indonesia%20First/Updated%20NDC%20Indonesia%202021%20-%20corrected%20version.pdf

DocuSign Envelope ID: BAA2B003-5CB6-44E5-90F7-D53ECE9F418A

Budget Tagging (CBT)[2], in 2018-2020, the government budget alone could only cover around 23% of the total required budget. The government needs to increase NPS' participation in climate change mitigation and mobilize additional financing. The CPI is expected to scale up mitigation actions in a cost-effective way as well as to increase NPS investment in low carbon development.

Given the downward trend of widely accessible public finance and the increasing emphasis to mobilize domestic and international private finance, it is imperative that UNDP provides an urgent support to the Government of Indonesia to implement and report on its NDC in the coming years. The support will focus on the development of ETS and greenhouse gas (GHG) Crediting Instrument (Domestic Offset Program), as both are considered to be the most appropriate CPIs for Indonesia. It leverages on on-going work under Climate Promise Workplan Service Line 4: Assess costs and investment opportunities. It will also build on UNDP's internal tool named the Paris Agreement LULUCF[3] Assessment and NDC Tool (PLANT) for the forestry sector which is a dominant contributor to achieving the NDC targets. PLANT maps the NDC and REDD+[4] to, among others, identify and mobilize new and additional domestic and international public and private finance to achieve the NDC, as well as identify opportunities to set up or strengthen systems and processes for the Enhanced Transparency Framework under the Paris Agreement which are fully consistent with REDD+ submissions. Furthermore, this project will align and contribute to the Global Climate Promise Framework, particularly Pillar 1 and Pillar 2.

The expected results are:

(1) From the regulatory perspective, one GHG emissions cap-setting regulation for the energy sector, a performance-based payment regulation on the forestry sector, and an offset policy that will benefit renewable energy and blue carbon development.
(2) Integrated registry system that connects existing sectoral systems of forestry[5] and energy[6] as well as support the development of ETS units' secondary market.
(3) Upgraded forest sector Monitoring, Reporting and Verification (MRV) for market readiness and the ETF.
(4) International Transfer of Mitigation Outcomes (ITMOs) under the United Nations Framework Convention on Climate Change (UNFCCC) Article 6 compatibility assessment translated into Indonesian context in a user-friendly manner, such as project criteria, corresponding adjustment guidelines so that ITMOs can advance country's sustainable development goals.
(5) 10 policy dialogues on various topics of domestic carbon market targeting varied stakeholders: line ministries, sub national government, to the private sector, that are held to gain inputs and support to ensure effective and gender, social inclusive policies and implementation

1.3 Stakeholder Engagement

- Project counterparts: Directorate General (DG) of Climate Change, Ministry of Environment and Forestry, who is in charge of both the carbon pricing instrument and the NDC. DG of Electricity, Ministry of Energy and Mineral Resources, who is responsible for formulating and implementing policies in the field of development, controlling, and supervision for any activities on electricity.
- Joint Crediting Mechanism (JCM): Partnership with JCM Secretariat in Indonesia will be pursued under the JSB project. Indonesia-Japan JCM initiated discussions and negotiations in 2010 and signed the bilateral agreement in 2013. To date 47 green projects in investment have been executed in partnership between Japanese companies and Indonesian private sector and resulted in verified GHG emissions reduction. Considering this experience, the partnership with JCM Secretariat will be focused on translating JCM scheme into ITMO context and take it forward as reference for development of ITMO guideline for Indonesia as planned under Component 4. Furthermore, once JCM is adopted as part of ITMO by the GoI, JCM scheme can be continued being practiced and promoted as one of carbon pricing mechanisms in Indonesia. Bilateral investment partnership among two countries' private sector under JCM will be promoted to other

[3] Land Use, Land-Use Change and Forestry

[4] Reduce emissions from deforestation and forest degradation in developing countries (REDD+, or REDD plus)

[5] National Forest Monitoring System

[6] Indonesia carried out a 6-month pilot ETS in the energy sector in 2021 with a pilot registry system https://apple-gatrik.esdm.go.id/. The proposed system in this country plan will increase the server capacity to accommodate more users, increase the security standard, as well as conduct other updates that are deemed necessary. It will connect the system by the Ministry of Energy with the National Registry System on Climate Change under the Ministry of Environment and Forestry.

DocuSign Envelope ID: BAA2B003-5CB6-44E5-90F7-D53ECE9F418A

potential green projects registered in National Registry System that seek for investment as well as offering carbon certificate for offset.

- UN and development agencies: UNDP's Green Climate Fund (GCF) REDD+ Results-based Payment (RBP) project is working with other development partners' forest initiatives through Indonesia Environment Fund, Ministry of Finance. The partnership will be utilized to strengthen the forestry sector components in this project. The project will also use Component 5 to have dialogues with other UN agencies, UK, USAID, ADB, WB and relevant partners on both energy and forestry topics.

1.4 Beneficiaries

Implementation of all planned activities will, directly and indirectly, benefit 7 Ministries (Ministry of Energy and Mineral Resources, Ministry of Environment and Forestry, Coordinating Ministry for Maritime and Investments Affairs, Ministry of Marine Affairs and Fisheries, Ministry of Trade, Ministry of Finance and Ministry of Foreign Affairs) for enhancing climate sustainability; 10 government staffs being certified as emission reduction verifiers; 163 power plant companies (coal and renewable-based) that will be incentivized to decarbonize and as a result 63.2 million electricity consumers who will have access to cleaner energy mix; 329 project proponents of mitigation actions; 350 representatives from key stakeholders being involved in the capacity building and policy dialogues;; and 584,000 people living in the surrounding of the forests.

Contribution to NDC target

The updated NDC submitted in 2021 pledges to reduce emissions from 2020-2030 by 29% (unconditional) up to 41% (conditional) against the 2030 business as usual scenario of 2.869 $GtCO_2e$. Forest and land use and energy sectors account for about 97% of the total national commitment.

Country NDC sector	Country NDC target	Project activity contributing to this target	Expected results towards target *(full achievement or partial)*
Energy (incl. fugitive)	11% reduction against business as usual (BAU) under unconditional mitigation scenario 15.5% against BAU under conditional mitigation scenario --- By 2025 and 2050, the primary energy supply mix as follows: a) new and renewable energy at least 23% in 2025 and at least 31% in 2050; b) oil should be less than 25% in 2025 and less than 20% in 2050; c) coal should be minimum 30% in 2025 and minimum 25% in 2050; and d) gas should be minimum 22% in 2025 and minimum 24% in 2050.	Activity 1.1 GHG emissions cap-setting guidelines for coal power subsector of the energy sector and cement subsector of the industry sector Activity 1.2: Offset and trading mechanisms focusing on energy sector, cement industry subsector and potential emission reduction from ocean sector Activity 2.1: Upgrading the registry system Activity 5.1: Holding 10 policy dialogues on various topics of NDC, Article 6, domestic carbon market targeting varied stakeholders, from the line ministries, sub national government, to the private sector, with gender lens	Partial: actual reduction will be evaluated when ETS is in place.
Waste	0.38% against BAU under unconditional mitigation scenario 1.0% against BAU under conditional mitigation scenario	N/A	N/A
IPPU	0.10% against BAU under unconditional mitigation scenario 0.11% against BAU under conditional mitigation scenario	Activity 1.1 GHG emissions cap-setting guidelines for coal power subsector of the energy sector and cement subsector of the industry sector Activity 1.2: Offset and trading mechanisms focusing on energy sector, cement industry subsector and potential emission reduction from ocean sector	N/A

DocuSign Envelope ID: BAA2B003-5CB6-44E5-90F7-D53ECE9F418A

Agriculture	0.32% against BAU under unconditional mitigation scenario 0.13% against BAU under conditional mitigation scenario	N/A	N/A
Forestry and Other Land Uses (FOLU)	17.2% against BAU under unconditional mitigation scenario 24.5% against BAU under conditional mitigation scenario	Activity 1.2: Offset and trading mechanisms focusing on energy sector, cement industry subsector and potential emission reduction from ocean sector Activity 2.1: Upgrading the registry system Activity 3.1: Improvements to forest sector MRV for market readiness and the ETF Activity 4.1: International Transfer of Mitigation Outcomes (ITMOs) Assessment for Indonesia	Partial: actual reduction will be evaluated when ETS and other carbon pricing transactions take place.

II. MANAGEMENT ARRANGEMENTS

The project will be implemented under the framework of the Climate Promise applying the Direct Implementation Modality (DIM)], where UNDP Indonesia will act as the Implementing Partner and Directorate General (DG) of Climate Change, Ministry of Environment and Forestry and DG of Electricity at the Ministry of Energy and Mineral Resources will be the main beneficiaries of the project. The project office will be located in UNDP Indonesia Country Office.

Under the DIM arrangement, UNDP will be responsible for (i) the identification and recruitment of project and programme personnel, (ii) procurement of goods and services, (iii) the administration of donor financial contributions and, (iv) provision of other technical or administrative support required to deliver the outputs. In providing these services, UNDP will apply its rules and regulations. Services provided by the UNDP Country Office will be subject to audit by UNDP's external (the United Nations Board of Auditors) and/or internal auditors (UNDP's Office of Audit and Investigation).

This support will be coordinated closely with other UNDP support initiatives to Government of Indonesia on the Green Climate Fund (GCF) REDD+ Results-based Payment (RBP) implementation, Indonesian Environment Fund and UN-REDD Programme Indonesia. Additionally, UNDP will aim to have effective engagement with private sector and investors, including but not limited to Japan owned companies in Indonesia, and will coordinate closely with Japan International Cooperation Agency's (JICA) related initiatives in Indonesia, also with other development partners working in energy and forestry sector, such as UK, USAID, ADB, WB. The success of CPI will rely on the trust and compliance of the private sector, accordingly, the policy dialogues are designed to engage them before the system is rolled out.
