United Nations Development Programme

Country/Region/Global: Ethiopia

Initiation Plan

Project Title: CLIMATE PROMISE 2 - Improving Access to Clean Cooking Energy Sources

Expected UNSDCF/CPD Outcome(s):

Outcome 1: By 2027, more people, especially women, youth, the most marginalized and poor, increasingly benefit from and contribute to inclusive, resilient, and sustainable socio-economic transformation at federal, provincial, and local levels.

Outcome 3: By 2027, more people, especially women, youth, children, and the most marginalized and poor, increasingly benefit from and contribute to building an inclusive, sustainable, climate-resilient and green society and reduced impacts of disasters at federal, provincial, and local levels.

Expected CPD Output(s): Enhanced financial, technical and institutional capacity of Climate Resilient Green Economy (CRGE) sectors, line ministries to develop, implement and monitor strategies and plans that promote climate-resilient green economy and society.

Initiation Plan Start/End Dates : January 1st 2024, to December 31st 2024

Implementing Partner : Ministry of Water and Energy

Brief Description

UNDP has provided some support for Ethiopia's CRGE implementation since its establishment. The most recent support under Climate Promise 1 project was towards updating Ethiopia's NDC and integrating it into the 10-year development plan of the country. With support from the World Resources Institute, the World Bank, and UNDP, the NDC updating process was completed in 2021. This helps the country meet the requirements of Paris Agreement by reporting it to the UNFCCC, including it into the ongoing national development plan in achievement of the Sustainable Development Goals.

In 2022, the country also developed the NDC implementation plan with the support of UNDP and NDC partnership support unit. The NDC implementation plan is a result-based framework that also serves as a tool to match demand and supply of the needs, minimizing fragmentation of services and providing greater leveraging of resources.

The Ministry of Water and Energy has developed the project on Improving Access to Clean Cooking Energy Sources based on the actions identified in the NDC implementation plan and requested for support through NDC partnership support unit.

This project aims to support national efforts to enhance access to clean cooking energy solutions and the accomplishment of the SDG 7 and NDC targets that the government has committed to meeting by 2030. When these objectives are met, the population's health and environment will improve, and global SDG and climate change commitments will be fulfilled.

I. PURPOSE AND EXPECTED OUTPUT

The purpose of this project is to contribute to national efforts to improve access to clean cooking energy solutions, as well as to achieve the SDG 7 and NDC targets that the country has proposed to achieve by 2030, which will allow improving the health and environment of the population and contributing to global SDG and climate change commitments. Achievement of these goals will allow the population's health and environment to improve, as well as contribute to global SDG and climate change commitments.

The project will help to achieve the following four outputs:

Output 1. A National Comprehensive Roadmap to improve access to clean cooking energy Developed.

The following activities will be carried out in order to achieve this output:

- **Conduct a situation analysis to assess the availability, affordability, and accessibility of clean cooking energy solutions.**

  In terms of the percentage of the population that primarily relies on clean fuels and technologies, the access rate to clean fuels for cooking (SDG 7.1.2) was recorded at 8% in 2021, up 4% from the level of 4% in 2015. In rural regions, the percentage of the population having access to clean cooking energy sources is still zero, whereas in urban areas, it has increased from 18% in 2015 to 27% in 2021. All things considered, the country's access to clean cooking energy in 2021 is still far lower than the average rate for the SSA region, which is 18% (5 percent for rural and 36 percent for urban regions).
  A thorough evaluation of the accessibility, cost, and availability of clean cooking energy options will be conducted under this activity.

- **Conduct a situation analysis to assess the health, social, economic, and environmental impacts of traditional and other cooking practices.**

  The health of people is at risk while using traditional cook stoves. Since smoke frequently contaminates interiors of homes, inefficient and improperly vented stoves create a dangerous indoor environment. The results of a research conducted by the World Health Organization indicate that indoor air pollution causes approximately four million premature deaths annually. Because women usually spend hours gathering wood and are exposed to smoke when cooking

at home, traditional stoves also contribute to gender inequality. In addition, it is common for youngsters to be required to gather firewood, which may be hazardous and time-consuming. As a result, the evaluation of the effects of conventional and alternative cooking methods on health, society, the economy, and the environment will be undertaken.

- **Conduct a scoping of ongoing clean cooking initiatives, and stakeholder analysis, as well as existing policies, regulations, and institutional frameworks, and financing mechanisms**

  There are many policies and strategies that regulate certain aspects of the cooking sector and set respective targets in line with broader objectives of the issuing institution. Though there are different policy and strategies related to clean cooking energy (such as the energy policy, the NDC/LT-LEDS each with different targets and standards), there is no one national integrated plan that could be used both by the public, CSO and private sector Organizations to achieve the clean cooking energy (SDG 7) and emission reduction targets (NDC/LT-LEDS) that the country has promised to achieve in its global commitments. The assessment in this activity will focus to identify these polies and strategies.

  The assessment will also conduct stakeholder analysis to see the existing coordination structure and look for ways to improve the national clean cooking coordination platforms that are currently in place. There are several causes of a lack of coordination and collaboration in promoting cleaner cooking energy solutions, including differences in institutional priorities and goals, difference in institutional structures, and processes, lack of communication and limited knowledge about what different organizations are doing and limited resources hinder public institution's ability to work together effectively and led to fragmentation and weak coherence and synergy in their operations. Furthermore, lack of coordination has resulted in duplication of efforts and loss of limited resources, and consequently, limited progresses in improving access to clean cooking energy solutions in Ethiopia and delivering on SDG7 and climate global commitments.

  The outcome of the study would be to outline improved approaches for inter-agency and policy coordination on clean cooking, bringing in relevant development, communities and private sector partners into this process.

- Community assessments (3 per region) will be conducted to investigate the local behaviors, technology preferences, contextual factors that may affect scaled-up clean cooking access (willingness to pay, cultural barriers, gender norms, etc.). Other SDG linkages will also be

explored as part of these assessments (e.g., links to indoor air quality, health, gender, etc.)". Finally, customized clean cooking energy solutions will be developed, taking into account the capacities, preferences, and food habits of the various communities in the major regions.
The terms of references (ToR) that will be developed during the project implementation will elaborate the detail design, roles and responsibilities of the different partners that will engage or support the field studies and detail implementation schedule as well as the field trips and workshops to be conducted.

During the process, two workshops will be held: one at the beginning to go over the approach, and another at the end to show and validate the case study's output.

- Modelling Exercise will be undertaken to show the different technological and policy pathways for a clean cooking transition in Ethiopia. To ensure that the model accurately reflects the real-world situation and produces meaningful results, a number of specific steps will be followed.

Output 2. Investment plan and bankable proposal for clean cooking developed

Based on the national comprehensive roadmap for the clean cooking energy subsectors (Output 1), an investment plan will be developed by undertaking the following activities:

- **Identify the financing needs:** The financing needs for clean cooking energy solutions can vary depending on the type of solution being implemented. It is important to conduct a thorough cost analysis to identify the costs of the technology, installation, and ongoing maintenance of the clean cooking solution. This analysis should also consider any potential financing-related risks, such as currency fluctuations or interest rate changes.
- **Identify potential funding sources:** Depending on the kind of solution being used, there may be different funding requirements for clean cooking energy solutions. To determine the expenses of the technology, installation, and continuing upkeep of the clean cooking solution, a comprehensive cost study is crucial. Any potential financing-related risks, such as changes in interest rates or currency values, should also be taken into account in this analysis.
- **Assess the feasibility of different financing options:** Public, private, international development, and charitable funds are some of the funding options available for clean cooking energy solutions. Based on the required results, the risk profile of the financing, and the financing needs, it is critical to determine which funding sources are most appropriate.
- **Develop investment plan:** A financing strategy should be created using the findings of the cost analysis and the evaluation of various funding sources. The required amount and type

of finance, as well as its source, terms, and payback schedule, should all be specified in the financing plan. Any possible risks and methods for mitigating them should also be taken into account.

- **Developing bankable projects:** This involve developing bankable project proposal for securing financing from different sources. National consultant will be recruited to design the bankable proposal.

Output 3. Coordination structure and systems for clean cooking energy established/updated

To achieve this output the following activities will be carried out:

- **Establish and strengthen coordination structure and systems for clean cooking energy**

Building on already-existing platforms, such as the development partner forum founded by the MoWE and Clean Coking Alliance and fortifying them to unite diverse stakeholders in pursuit of a shared objective, is one way to address the coordination issue. This will be based on the results of the stakeholder analysis that will be completed as part of the scoping study. This may involve assembling a coalition, task force, or working group made up of representatives from different organizations, including governments, non-governmental organizations, the private sector, and development partners. Additionally, creating a shared agenda among stakeholders can help with investment planning, negotiating and reaching an agreement on roles and duties, establishing effective communication, and creating a common framework for planning, monitoring, and evaluation. Because the new coordination structure will be built upon the current one, the platform will continue to function even after the project is completed.

Development Partners activities in the sector

The clean sector receives overall leadership from a development partner that meets every six months and is currently operational. Bilateral, multilateral, and non-governmental organizations that support the clean cooking industry with a variety of services—such as technical assistance, program implementation, technology promotion, and financing access—are among the members of the development partners forum. To mention some of them:

Organizations	Major roles and responsibilities
The World Bank	Since the 1980s, the World Bank has been a significant backer of the country's cook stove program. It provided funding for the "Cooking Efficiency and New Fuels Marketing Project," a national initiative that created better commercial stoves that are now on the market. DBE was given access to a $40 million IDA line of credit in 2013 and 2016 to help grow the market for energy-efficient and renewable energy products. By: 1) offering working capital loans to private sector enterprises (PSEs) that import, manufacture, and distribute off-grid renewable technologies, and 2) offering loans to micro-finance institutions (MFIs) for on-lending to end-users, the credit line has addressed the issue of access to financing across the value chains of off-grid technologies.
GIZ Endev	ICS is one of the energy-related activities that GIZ Endev carries out. Since the late 1990s, GIZ has promoted the use of ICS. It supplied technical assistance to private companies manufacturing and marketing upgraded stoves. Numerous hundred ICS producers received assistance and training to launch ICS businesses in the regions of the country.
SNV Ethiopia	Together with the Ministry SNV Ethiopia implements the National Biogas Program where clean cooking with biogas is highly promoted. It has also helped the establishment of the "Ethiopian Clean Cooking Alliance".
UNDP	UNDP provides supports to the Ministry for implementation of improved cook stove program. Playing a catalytic role by setting up a solid MRV system for the ICS program.
European Union (EU)	The EU supports Energizing Development (Endev) program which is under implementation in Ethiopia by GIZ.
UNHCR	Active in dissemination of decentralized energy efficient technologies in refugee camps in Ethiopia, in collaboration with MOWE and Regional Energy Bureaus
African Development Bank (AfDB)	AfDB through its Sustainable Energy Fund for Africa supports delivering of clean cooking solutions.
Others	Several NGOs like World Vision, GAIA, Christian AID Ethiopia and other organizations also promoted and distributed improved and clean cooking stoves in rural areas and displacement setting.

Clean cooking alliance

It was founded in the interest of several allies involved in the clean cooking sector. Ethiopian Clean Cooking Alliance Association (ECCA) is a civil society group that was registered and granted legal personality on July 15, 2019, under Civil Society Group Proclamation No. 1113/2019.

ECCA is using a unique platform of membership from all sectors to rally professional, technical, financial, entrepreneurial, and institutional capacity. Because the coalition includes civil society, public, private, and non-governmental organizations (NGOs), it is an inclusive platform where all voices are heard.

The alliance aims to foster solidarity among clean cookstove and clean fuel stakeholders, as well as to form successful partnerships, in order to make the use of clean cookstoves and fuels the norm in Ethiopian families and institutions.

The Ethiopian Enabling Environment for Clean Cooking Sector (SEECCS) provided technical and financial assistance to the ECCA formation process. SEECCS was established to boost Ethiopia's enabling environment for the clean cooking sector with interventions centered on organizational and institutional capacity development and sector facilitation, especially for improved cookstoves, biogas, and bio-fuel.

Overview of the private sector and existing distribution channels

Improved and clean cooking fuels and stoves are produced and distributed in large part by the private sector. Since the early 1980s, a large number of private sector participants have been active in the national economy.

The private sector has been assisted by the government, non-government, development partners, bilateral and multilateral organizations, etc. in the areas of policy and regulation design, research and development, and technical capacity building in the development of the enhanced and clean cooking industry.

Output 4. Value chain analysed and Market Development Plan Developed

The activity to be carried out under this output is:

Conduct a market survey to identify existing pipeline of clean cooking technologies, companies and financing needs and develop market development plan and carry out value chain analysis

The value chain analysis involves understanding service delivery constraints and opportunities all the way through the chain of operations from manufacturing to the cooking energy solutions markets

and promoting solutions from the market or consumers perspectives. The outcome of the study will enable to identify specific segments/points that can bring positive changes in the business supply chain that benefits both the manufacturers and the service providers involved in clean cooking energy solutions subsector.

Additionally, two significant activities—an exploratory survey and detailed research—will be conducted in succession to provide information on the nature and scope of interventions that the national comprehensive plan/roadmap and investment plan will undertake to enhance the delivery and access to clean cooking energy solutions in Ethiopia (and major regions). An exploratory survey is the first, serving as a baseline investigation to characterize supply networks, actors, and performance in general. The participatory market mapping exercise and the literature review will be the main instruments used in this survey.

Through participatory market mapping, information on particular markets and supply chains, including their actors, operations, settings, and demands, may be succinctly and visually communicated to a variety of stakeholders, including manufacturers, policy makers, users, private service providers, and traders. Participation is encouraged as various actors work together to define the players and structure of the supply chain, identify the critical environment for growth, and evaluate service requirements. The results of this exercise will make it possible to come to an agreement on workable strategic actions or interventions (along the supply chain) and bargain with the stakeholders about their possible role in the implementation that follows. This will help to foster a common understanding of the opportunities and challenges facing the market for clean cooking energy solutions.

A more detailed study will then be formulated based on the outcome of the first market survey. This detailed study is conducted to identify and characterize specific actors, explain relationships among actors, pinpoint the different bottlenecks faced by the actors along the chain that affected performance and finally propose measures to tackle these problems.

At the end of the detailed study, a workshop will be organized to share and discuss the findings with stakeholders (including key market actors, policy makers and Development Partners) and finally agree on intervention measures. These will enable MoWE and its partners to develop tailor made interventions required to improve supply chain and service markets for clean cooking energy solutions subsector and agree with all key partners on their interventions.

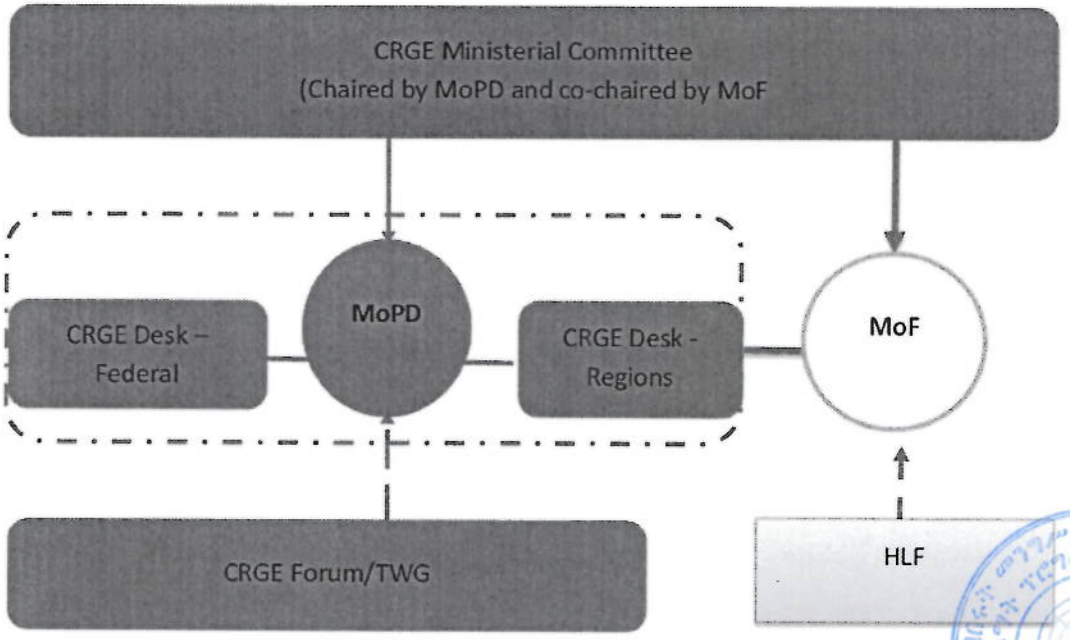

II. MANAGEMENT ARRANGEMENTS

4.1. Climate Resilient Green Economy (CRGE)/Ethiopia's Nationally Determined Contribution (NDC) Governance at the National Level

The Ministry of Planning and Development is tasked with coordinating the sectoral government entities in order to successfully implement and manage the climate resilient green development strategy within the national development planning framework, according to the new integrated CRGE governance structure, which is based on Proclamation 1263/2021's updated description of government bodies' powers and tasks.

Through the created inter-ministerial steering committee, which is chaired by these two organizations, the MoPD and MoF will oversee the project's overall planning, implementation, monitoring, and assessment. This inter-ministerial steering committee meeting will receive an update on the project's overall implementation status, and recommendations will be solicited.

To enhance the roles and participation of development partners in Ethiopian climate activities and investments, the CRGE Development Partners Forum has been established and is operational, in addition to the inter-ministerial steering committee. In order to increase Ethiopia's capacity for climate adaptation and mitigation, this platform will also help in the discovery and mobilization of funding, technology, and support for climate action. Therefore, achievement of the project will be presented also in this platform and additional support will be leveraged and coordination will be created

4.2.Project Management

The project will be implemented following UNDP's national implementation modality. The Implementing Partner for this project is MoWE. The Implementing Partner is the entity to which the UNDP Administrator has entrusted the implementation of UNDP assistance specified in this signed project document along with the assumption of full responsibility and accountability for the effective use of UNDP resources and the delivery of outputs, as set forth in this document.

The ministry of water and energy will be in charge of overseeing the entire project implementation process, reporting to the UNDP on the progress made. The ministry will also play a major role in tracking and monitoring the project implementation process, ensuring that any deviations are promptly corrected. MOWE will oversee program execution and provide institutional, legislative, and regulatory support as needed during the course of action, with support from the UNDP.

The steering group, which was formed by the MoWE minister, will keep an eye on the overall outcomes of the clean cooking initiative, which all implementing institutions are required to carry out. Key Performance Indicators (KPIs) that are precise, quantifiable, and time-bound will be established by the steering committee to track each implementing institution's progress.

The ministry will oversee, manage, and keep an eye on the project's timely and efficient completion through its environment, social, and climate change desk. MoWE will oversee, act as a general coordinator, and provide the UNDP with progress updates. The MoWE and UNDP, the project implementing agency, will be in charge of contracting consultants to carry out surveys or studies. According to the specified indicators, UNDP will prepare progress reports on a quarterly basis; for the intermediate indicators

The following government, civil society organization and development organization will be engaged during the different stages of the project.

No.	Institutions	Their role and responsibilities
1	MoWE	Oversees energy policy and implementation, including clean cooking energy solutions and overall implementation of the project
2	Ethiopian Forestry Development	Responsible for forestry interventions included in the updated NDC and the REDD Strategy. It promotes improved cook stoves to reduce deforestation and environmental impacts of traditional biomass cook stoves

3	MoH, Ministry of Women and Youth Affairs and other government organization like Ethiopia Electricity power, Ethiopia Electric Utility and Regional Energy Offices	Promoting clean cooking energy solutions and therefore these are major stakeholders of the project
4	Civil society CSOs- World vision, SOS Ethiopia, Water Aid Ethiopia, Plan International Ethiopia, Cure Ethiopia, Action for Social Development and Environmental Protection Organization (ASDEPO), People in Need (PIN)	Provide data and participate in the implementation of project activities and in their validation
5	Development partners including the World Bank, FAO, SNV, GIZ, KOICA, JICA, UNEP, WRI, NDC Partnership Support Unit, EU, FCDO/UK, WRI and other members of the CRGE Forum	Provide data and participate in the implementation of project activities and in their validation
6	Private Sectors	Provide data and participate in the implementation of project activities and in their validation
7	Communities and CBOs	Participate in the case studies and other studies to be conducted as a part of this project and provide the necessary information
8	National Universities	Participate in workshops, training and the development of the guidelines

4.3.The Project Steering Committee

The project steering committee (PSC) that will be established will also guide the implementation of the project. In order to ensure UNDP's ultimate accountability, PSC decisions should be made in accordance to standards that shall ensure best value to money, fairness, integrity transparency and effective international competition. Based on the approved annual work plan (AWP), the Project may

review and approve project quarterly plans when required and authorizes any major deviation from these agreed quarterly plans. It is the authority that signs off the completion of each quarterly plan as well as authorizes the start of the next quarterly plan. It ensures that required resources are committed and arbitrates on any conflicts within the project or negotiates a solution to any problems between the project and external bodies.

Specific responsibilities of the PSC:

- ✓ Review and appraise detailed Programme Plan and AWP, including reports covering activity definition, quality criteria, issue log, updated risk log and the monitoring and communication plans
- ✓ Ensure coordination between various donor and government-funded projects and programmes;
- ✓ Ensure coordination with various government agencies and their participation in project activities;
- ✓ Appraise the annual project implementation report;
- ✓ Provide direction and recommendations to ensure that the agreed deliverables are produced satisfactorily according to plans;
- ✓ Approve the project Inception Report and Terminal Evaluation reports and corresponding management responses;
- ✓ Review the final project report package during an end-of-project review meeting to discuss lesson learned and opportunities for scaling up;
- ✓ Make recommendations for follow-on actions

4.4.Project Manager

The Project Manager has the authority to run the project on a day-to-day basis on behalf of the Implementing Partner within the constraints laid down by the PSC. The Project Manager's primary responsibility is to ensure that the project produces the results specified in the project document, to the required standard of quality and within the specified constraints of time and cost. The Project Manager will inform the PSC and the Project Assurance roles of any delays or difficulties as they arise during implementation so that appropriate support and corrective measures can be adopted.

Specific responsibilities include:

- Manage the overall conduct of the project.
- Plan the activities of the project
- Execute activities by managing goods and services, training and low-value grants, including drafting terms of reference and work specifications, and overseeing all contractors' work.
- Provide support for completion of assessments required by UNDP, spot checks and audits.
- Manage requests for the provision of UNDP financial resources through funding advances, direct payments or reimbursement using the FACE form.
- Monitor financial resources and accounting to ensure the accuracy and reliability of financial reports.
- Monitor progress, watch for plan deviations and make course corrections when needed as agreed by PSC-agreed to achieve results.
- Ensure that changes are controlled and problems addressed.
- Perform regular progress reporting to the project board as agreed with the board, including measures to address challenges and opportunities.
- Prepare and submit financial reports to UNDP on a quarterly basis.
- Capture lessons learned during project implementation.
- Prepare revisions to the multi-year work plan, as needed, as well as annual and quarterly plans if required.
- Manage the preparation of Project Steering Committees and other meetings and follow up on all decisions taken to ensure implementation and/ or timely action.
- Submit required and other project reports (progress, financial, procurement, etc.) for management information, oversight and action.
- Support the Terminal Evaluation process.

III. MONITORING

To make sure the project achieves these objectives, the project results, as outlined in the multi-year work plan, will be regularly reviewed throughout project execution.

In order to ensure that UNDP M&E needs are met in a timely manner and to the highest possible standards, the UNDP Country Office will work with project stakeholders to ensure that monitoring at the project level is carried out in compliance with UNDP regulations as outlined in the UNDP POPP and UNDP Evaluation Policy.

In addition to these essential UNDP requirements, other M&E activities that are deemed necessary to support project-level adaptive management will be decided upon during the Project Inception Workshop and included in the Inception Report.

UNDP Country Office will submit quarterly and annual reports to the Climate Promise team according the Climate Promise framework.

Knowledge management: The project team will see to it that best practices and lessons learned are gathered and shared. The results will be disseminated to target audiences using appropriate networks and information-sharing forums. The initiative will make contributions to policy-based, scientific, and/or other networks as needed.

Visibility: This project benefits from the support of UNDP Climate Promise initiative. The Climate Promise is funded by the governments of Germany, Japan, the European Union, the United Kingdom, Sweden, Spain, Belgium, Iceland, Italy, of Portugal and other major UNDP contributors, and underpins UNDP's contribution to the NDC Partnership. Any product developed under the Climate Promise must use the program logos in recognition of all Climate Promise donors. A guidance note on the visibility of the Program is available online.

IN ACCORDANCE WITH UNDP'S PROGRAMMING POLICIES AND PROCEDURES, THE PROJECT WILL BE MONITORED THROUGH THE FOLLOWING MONITORING PLAN:

MONITORING PLAN

Monitoring Activity	Purpose	Frequency	Expected Action
Track results progress	Progress data against the results indicators in the multi-year work plan will be collected and analysed to assess the progress of the project in achieving the agreed outputs.	Quarterly, or in the frequency required for each indicator.	Slower than expected progress will be addressed by project management.
Monitor and Manage Risk	The annual project quality rating summary, an updated risk assessment with mitigation strategies, any evaluation or review reports completed during the period, and progress data demonstrating the results achieved against pre-defined annual output targets will all be included in a progress report that will be given to the Project PSC and important stakeholders.	Quarterly	Risks are identified by project management and actions are taken to manage risk. The risk log is actively maintained to keep track of identified risks and actions taken.
Learn	Knowledge, good practices and lessons will be captured regularly, as well as	At least annually	Relevant lessons are captured by the project team and used

	actively sourced from other projects and partners and integrated back into the project.		to inform management decisions.
Annual Project Quality Assurance	The quality of the project will be assessed against UNDP's quality standards to identify project strengths and weaknesses and to inform management decision making to improve the project.	Annually	Areas of strength and weakness will be reviewed by project management and used to inform decisions to improve project performance.
Review and Make Course Corrections	Internal review of data and evidence from all monitoring actions to inform decision making.	At least annually	Performance data, risks, lessons and quality will be discussed by the project board and used to make course corrections.
Project Report	A progress report will be presented to the Project PSC and key stakeholders, which will include progress data showing the results achieved against pre-defined annual output targets, the annual project quality rating summary, an updated risk long with mitigation measures, and any evaluation or review reports prepared during the period.	On six months basis, and at the end of the project (final report)	
Project Review (Project PSC)	The project's governance mechanism (i.e., project steering committee) will hold regular project reviews to assess the performance of the project and review the Multi-Year Work Plan to ensure realistic budgeting over the life of the project. In the project's final year, the PSC shall hold an end-of project review to capture lessons learned and discuss opportunities for scaling up and to socialize project results and lessons learned with relevant audiences.	Specify frequency (i.e., at least annually)	Any quality concerns or slower than expected progress should be discussed by the project board and management actions agreed to address the issues identified.

Terminal Evaluation (TE):

An independent terminal evaluation (TE) will take place upon completion of all major project outputs and activities. The terms of reference, the evaluation process and the final TE report will follow the standard templates and guidance prepared by the UNDP
